

Goncalves fetal population UMAP and full TBS tree

Cell UMAP and matching whole radial adaptive-diffusion TBS tree

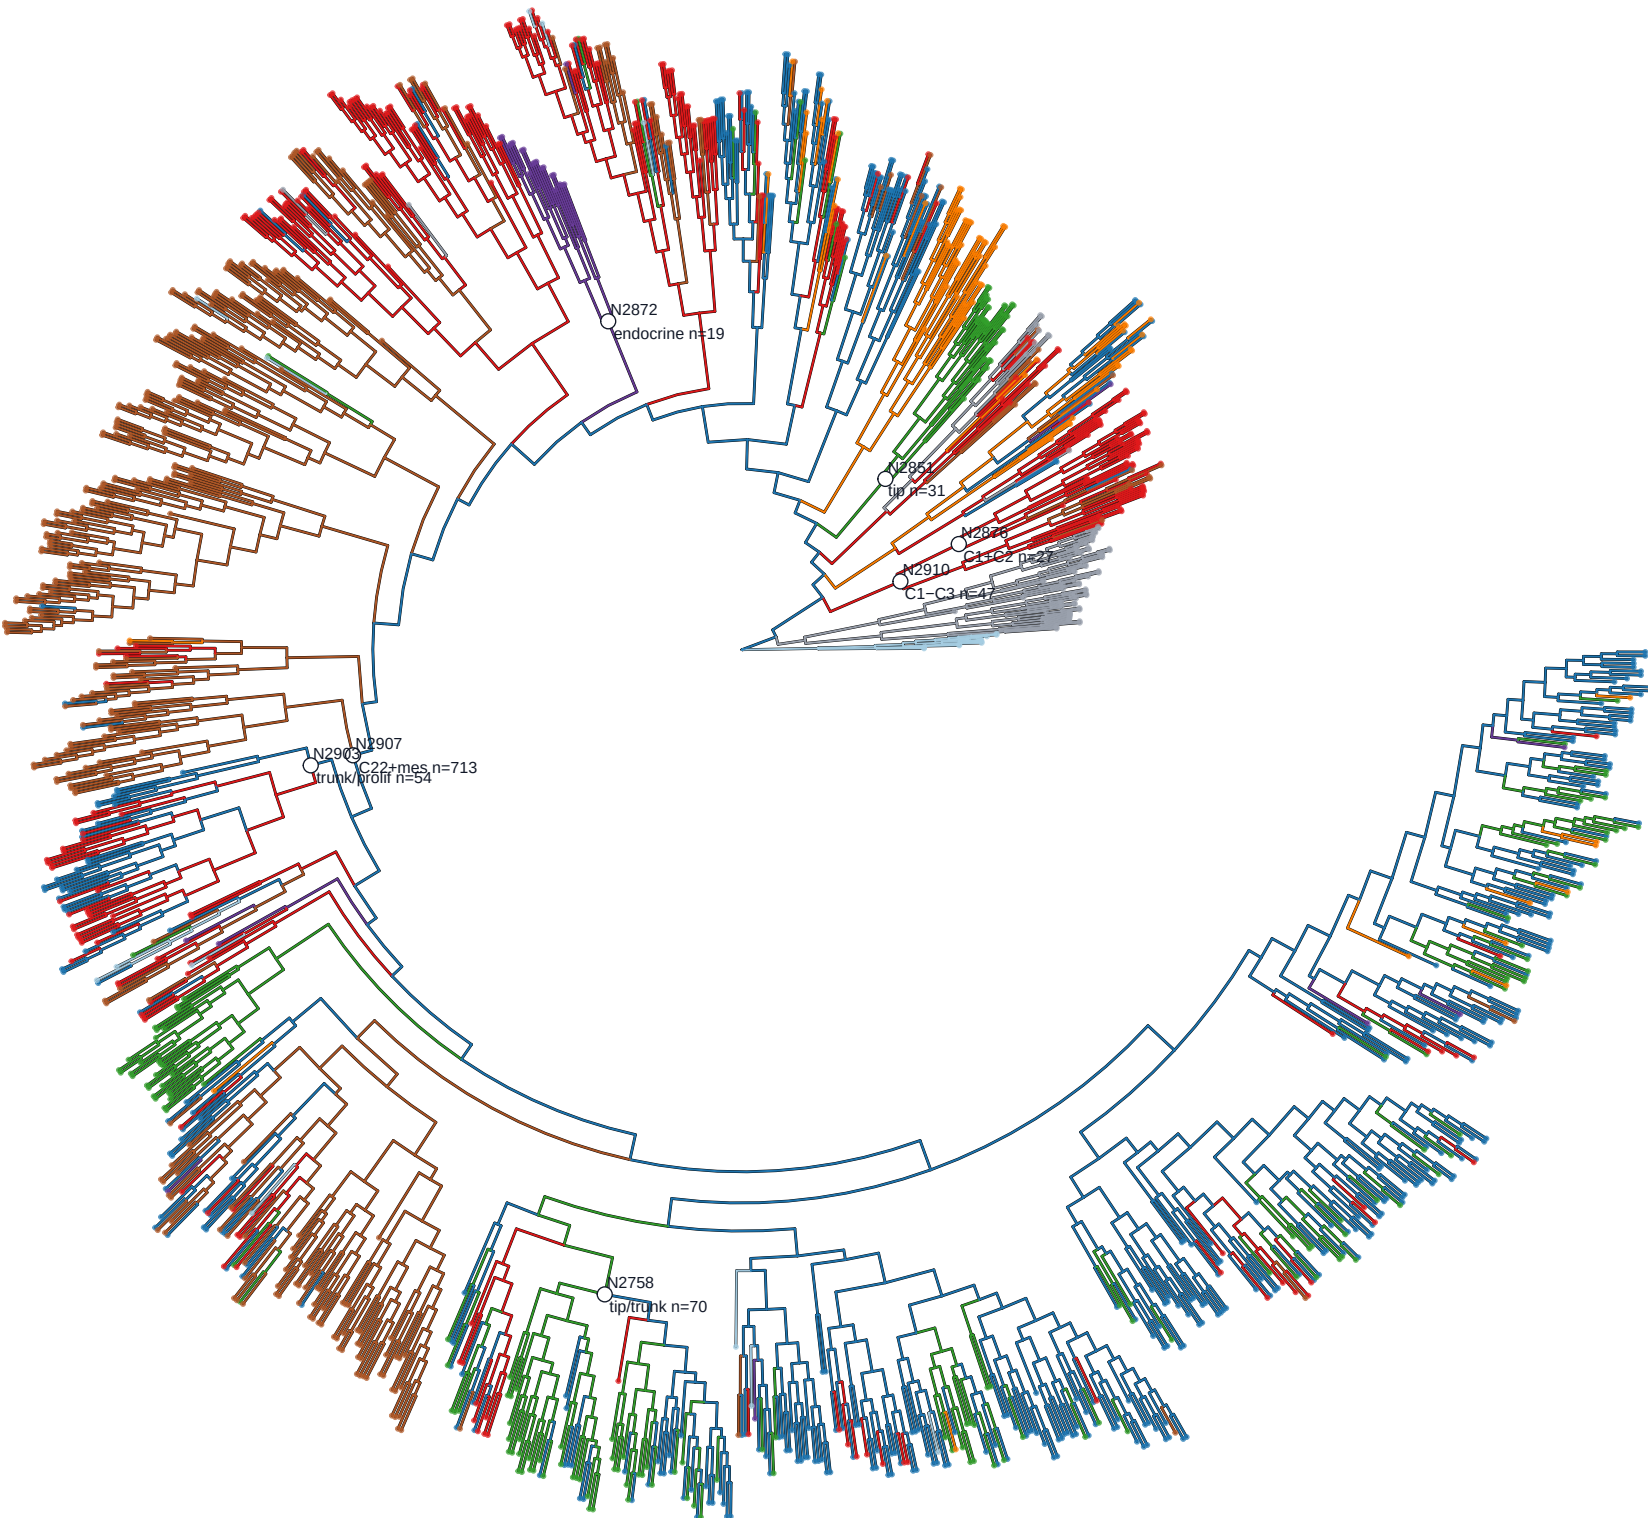

UMAP by fetal population

Same cell labels used for terminal tree tips

Goncalves adaptive-diffusion TBS tree by dominant fetal population

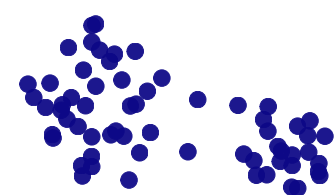

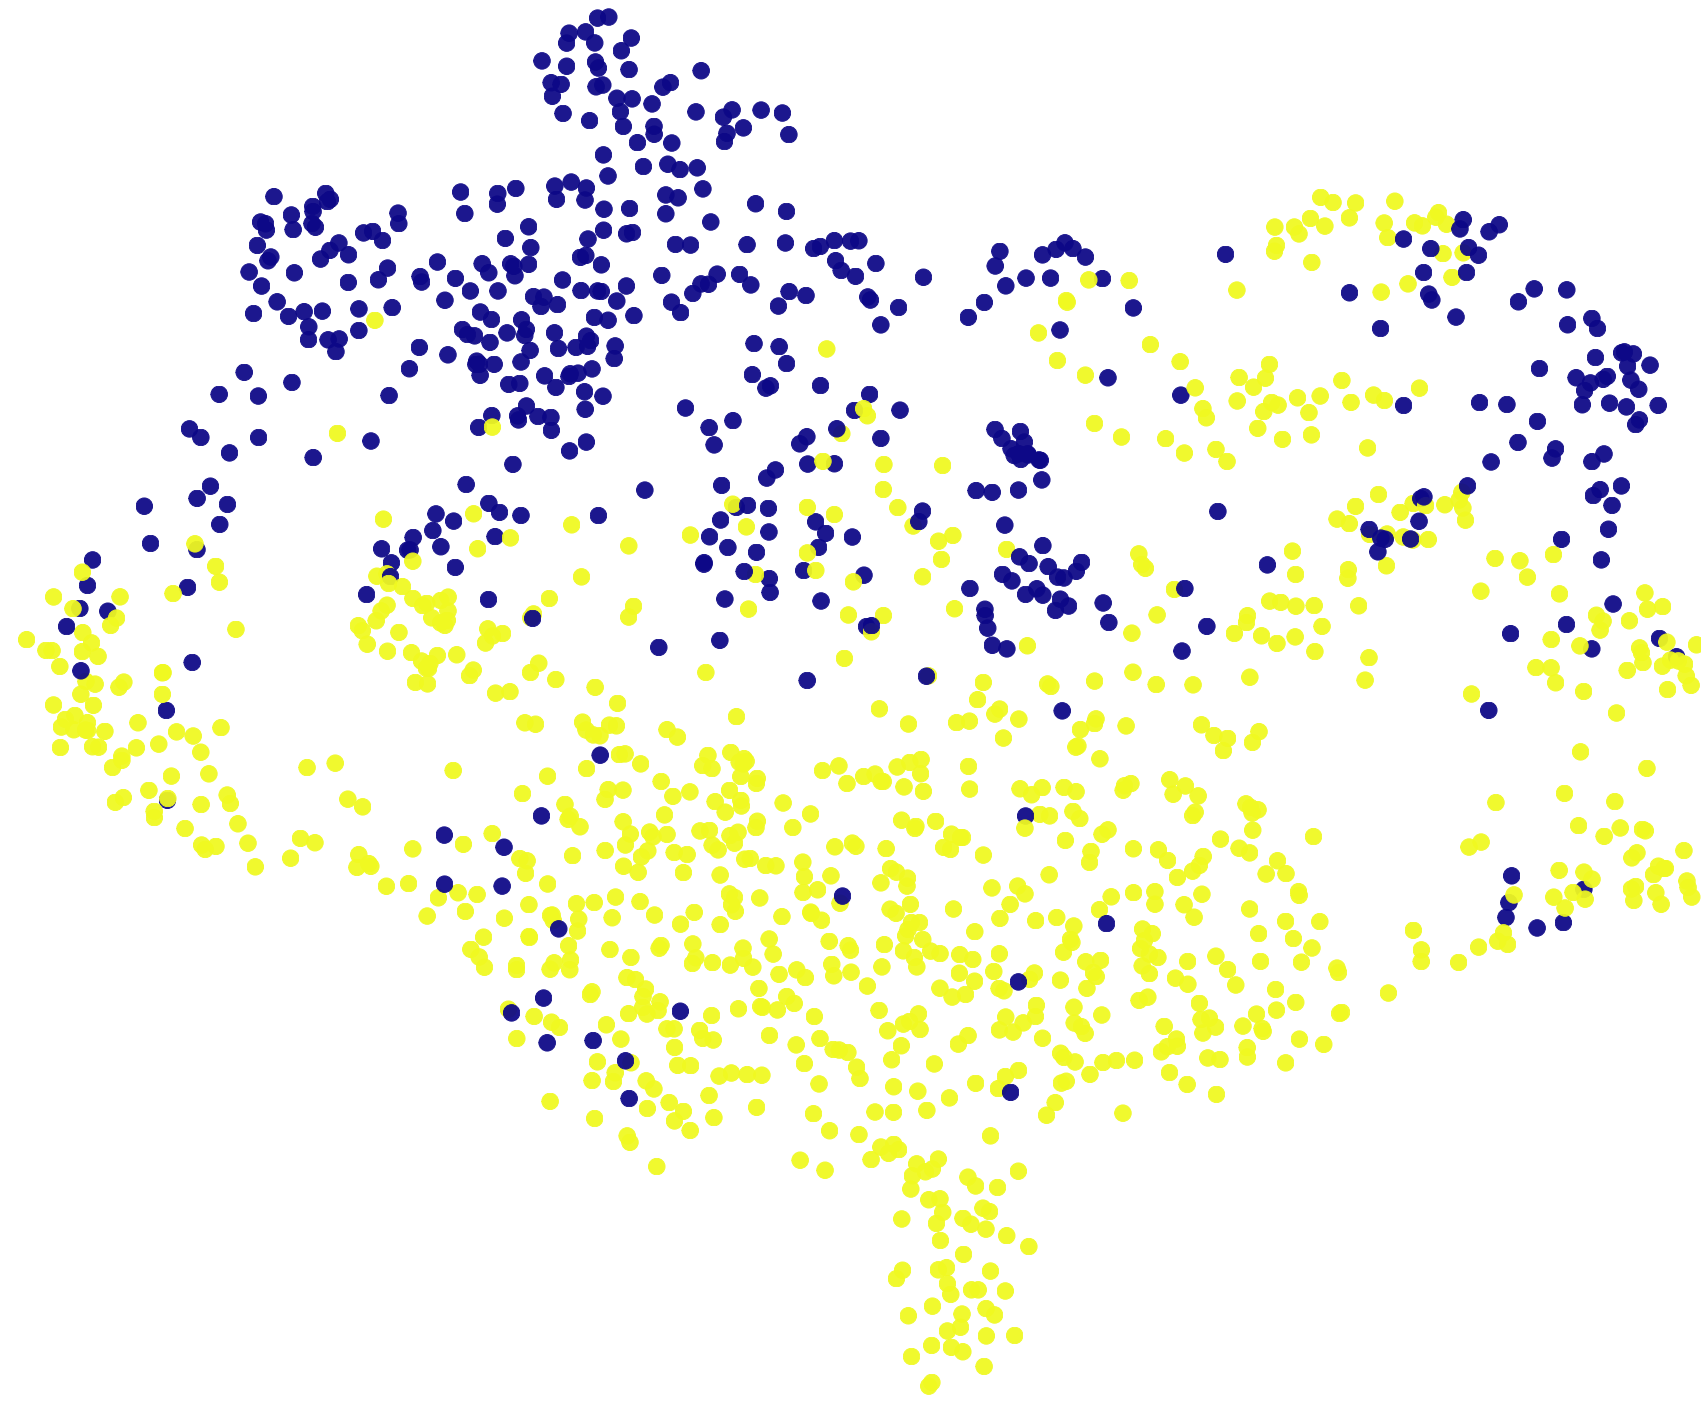

Whole tree; labels mark progenitor/endocrine nodes from the signature analysis

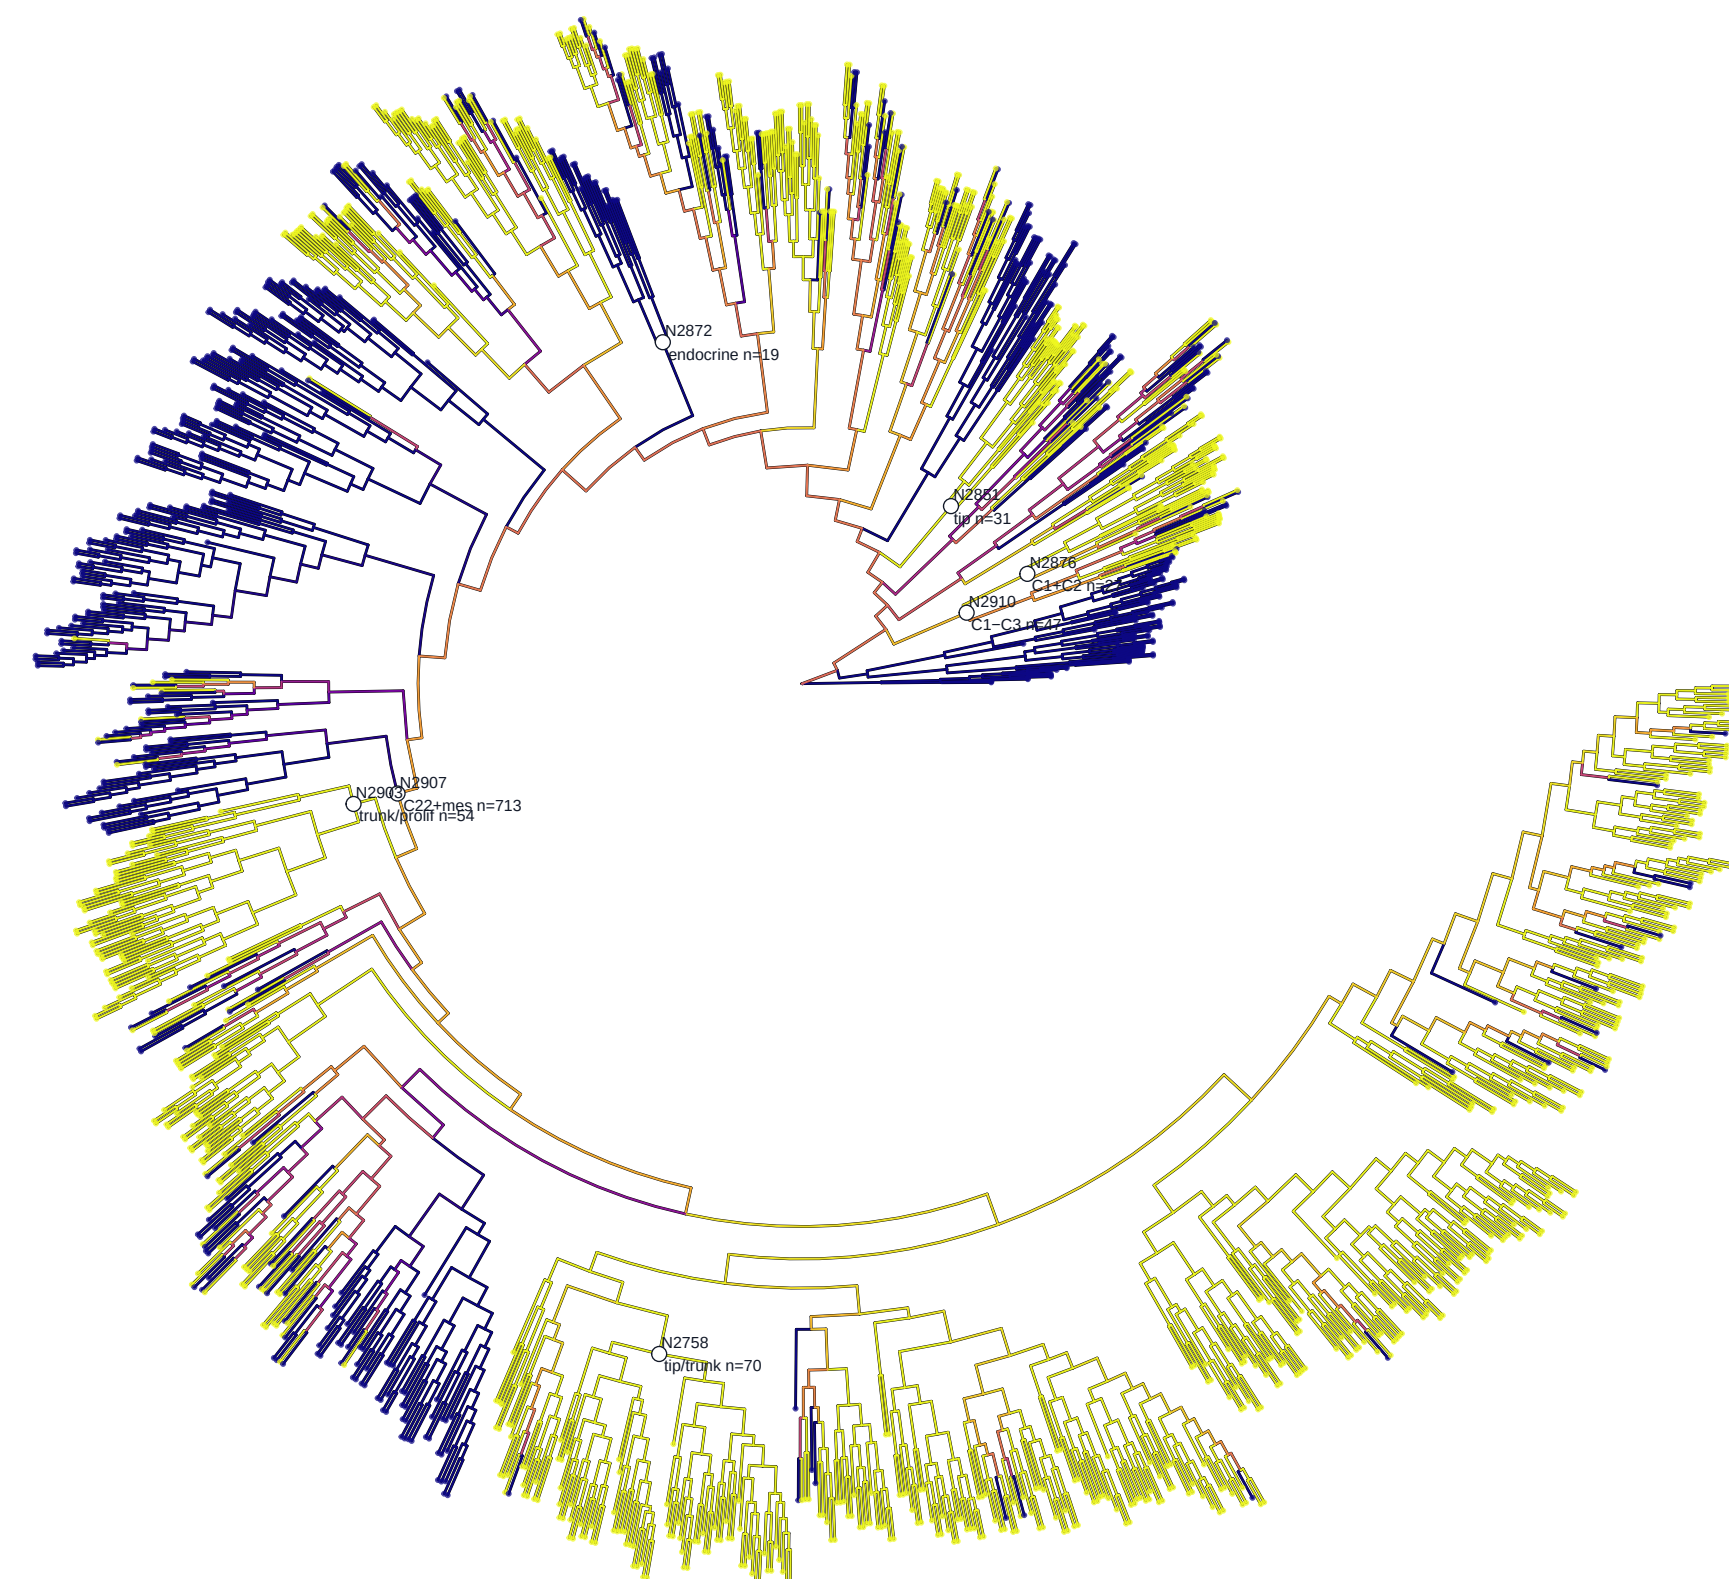

trunk proliferating mesenchyme neurons
tip endocrine blood unknown

Cell-level trunk/tip/proliferating membership beside descendant fraction on the whole tree

Tree color is descendant fraction; cell-level UMAP is 0/1 membership

Continuous color is fraction of descendant cells labeled trunk, tip, or proliferating

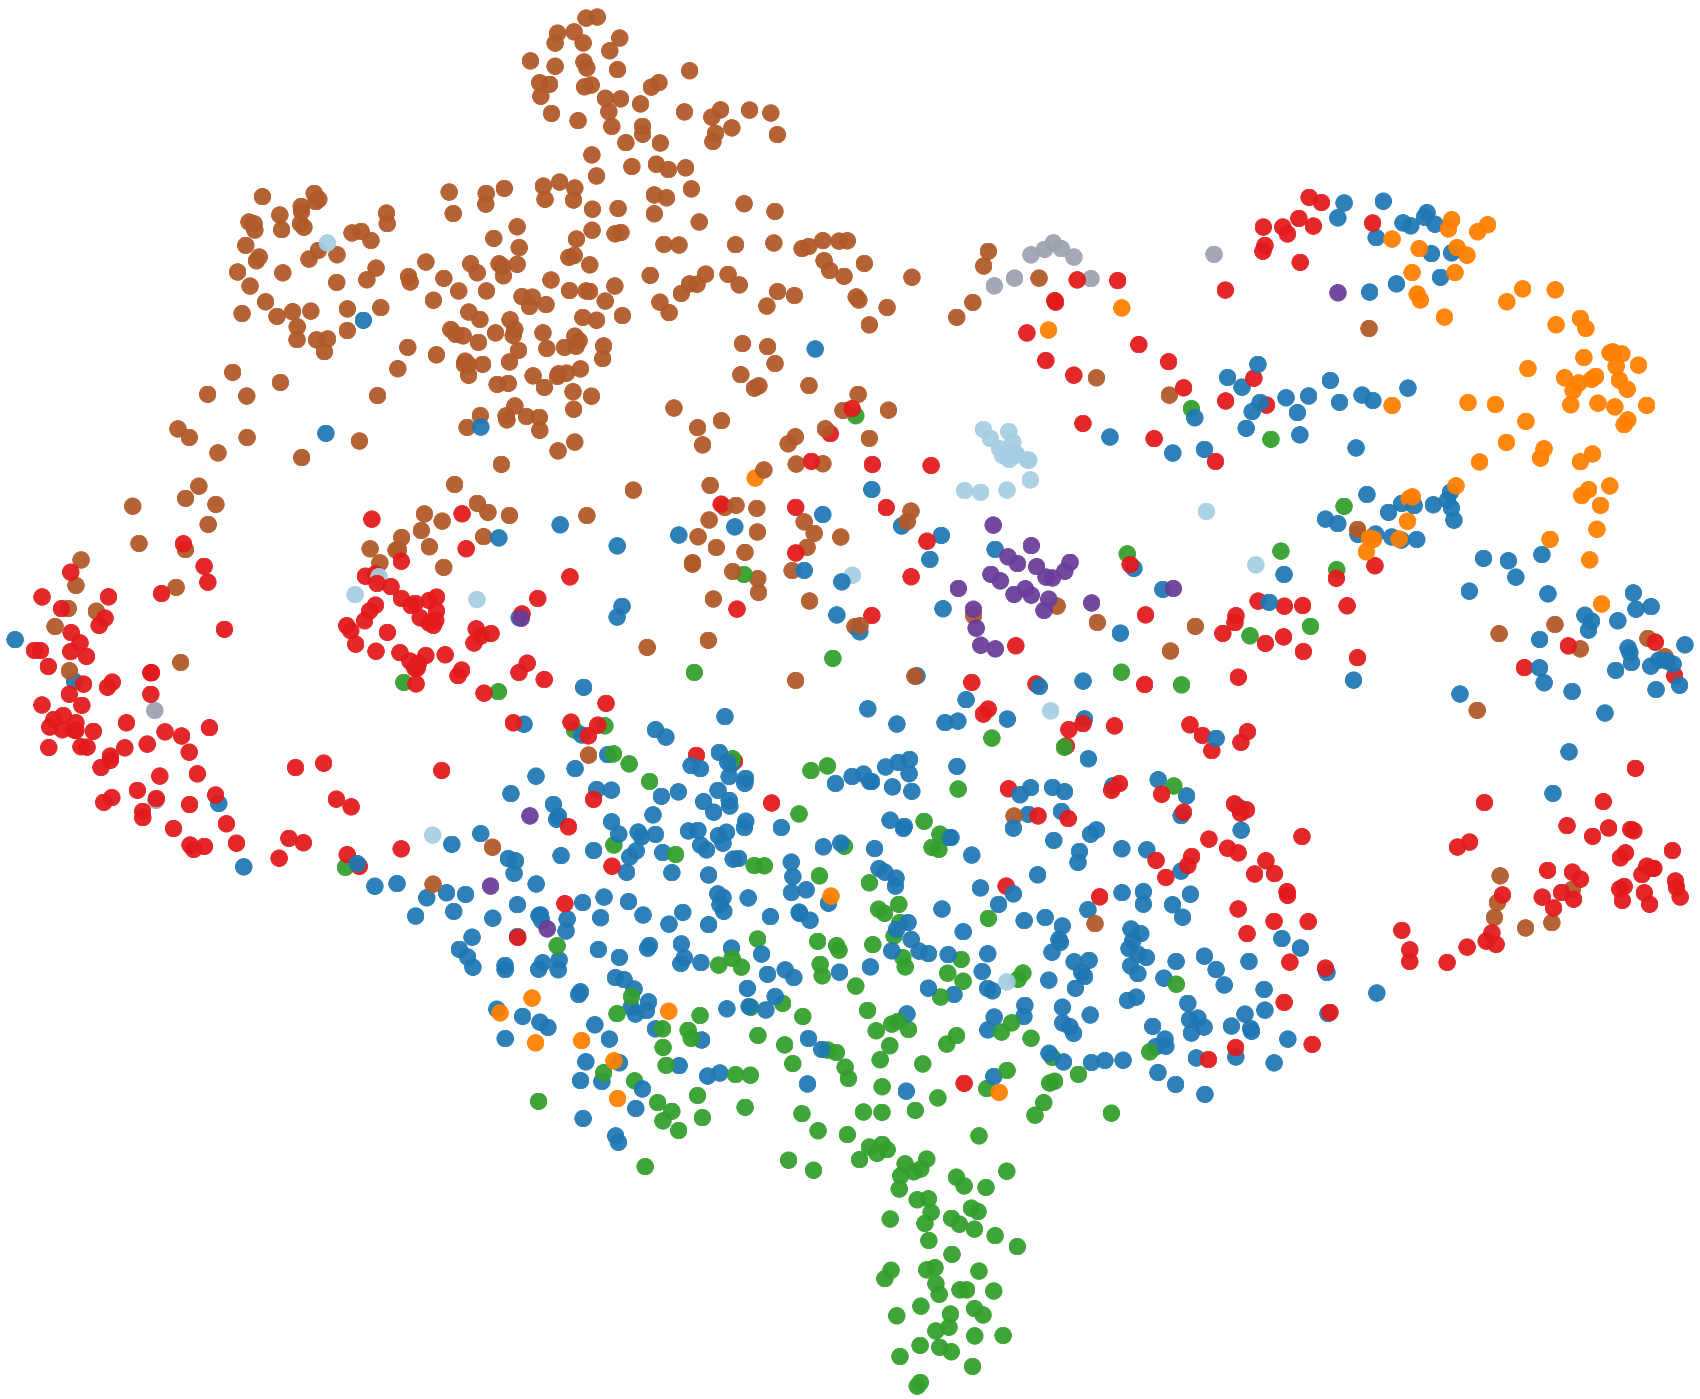

Goncalves progenitor-state UMAP and full TBS tree

Terminal cells and internal tree branches shown with progenitor-state interpretation

UMAP by progenitor interpretation

Terminal cells use population-derived state classes

Goncalves adaptive-diffusion TBS tree by progenitor interpretation

Internal branches use marker/population interpretation; terminal cells use their population label
