

Goncalves adaptive-diffusion TBS tree: cluster result versus progenitor context

All four panels use the same TBS tree; only the branch coloring changes

Goncalves adaptive-diffusion TBS tree by final cluster

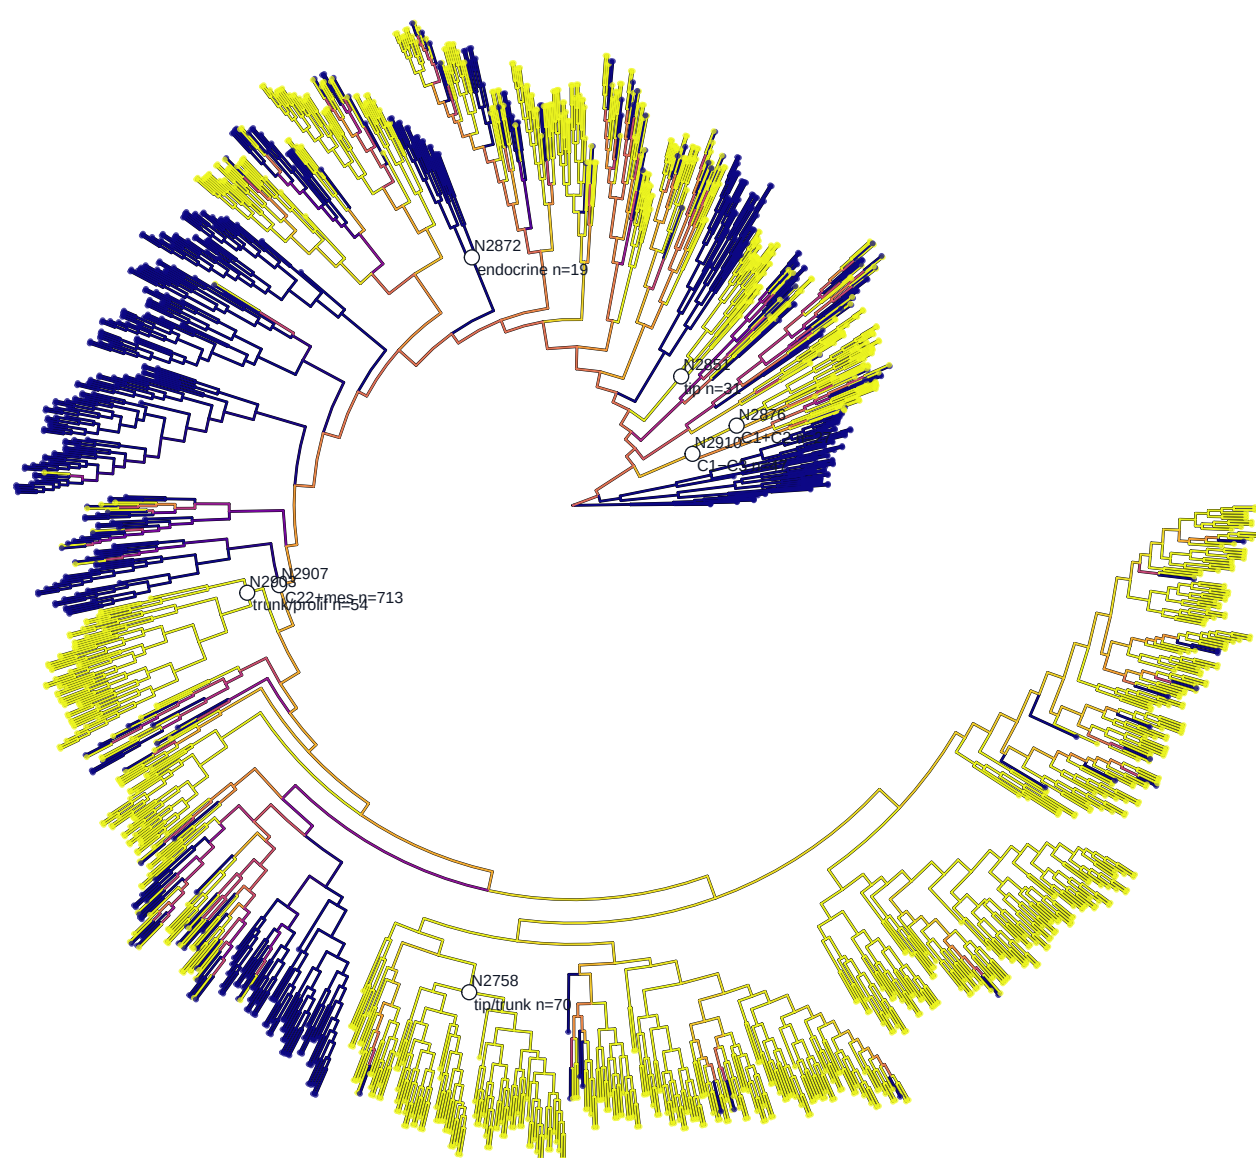

Colored branches are exact final cluster subtrees; pale grey marks shared ancestors

Cluster size ○ 200 ○ 400 ○ 600

Goncalves adaptive-diffusion TBS tree by progenitor fraction

Continuous color is fraction of descendant cells labeled trunk, tip, or proliferating

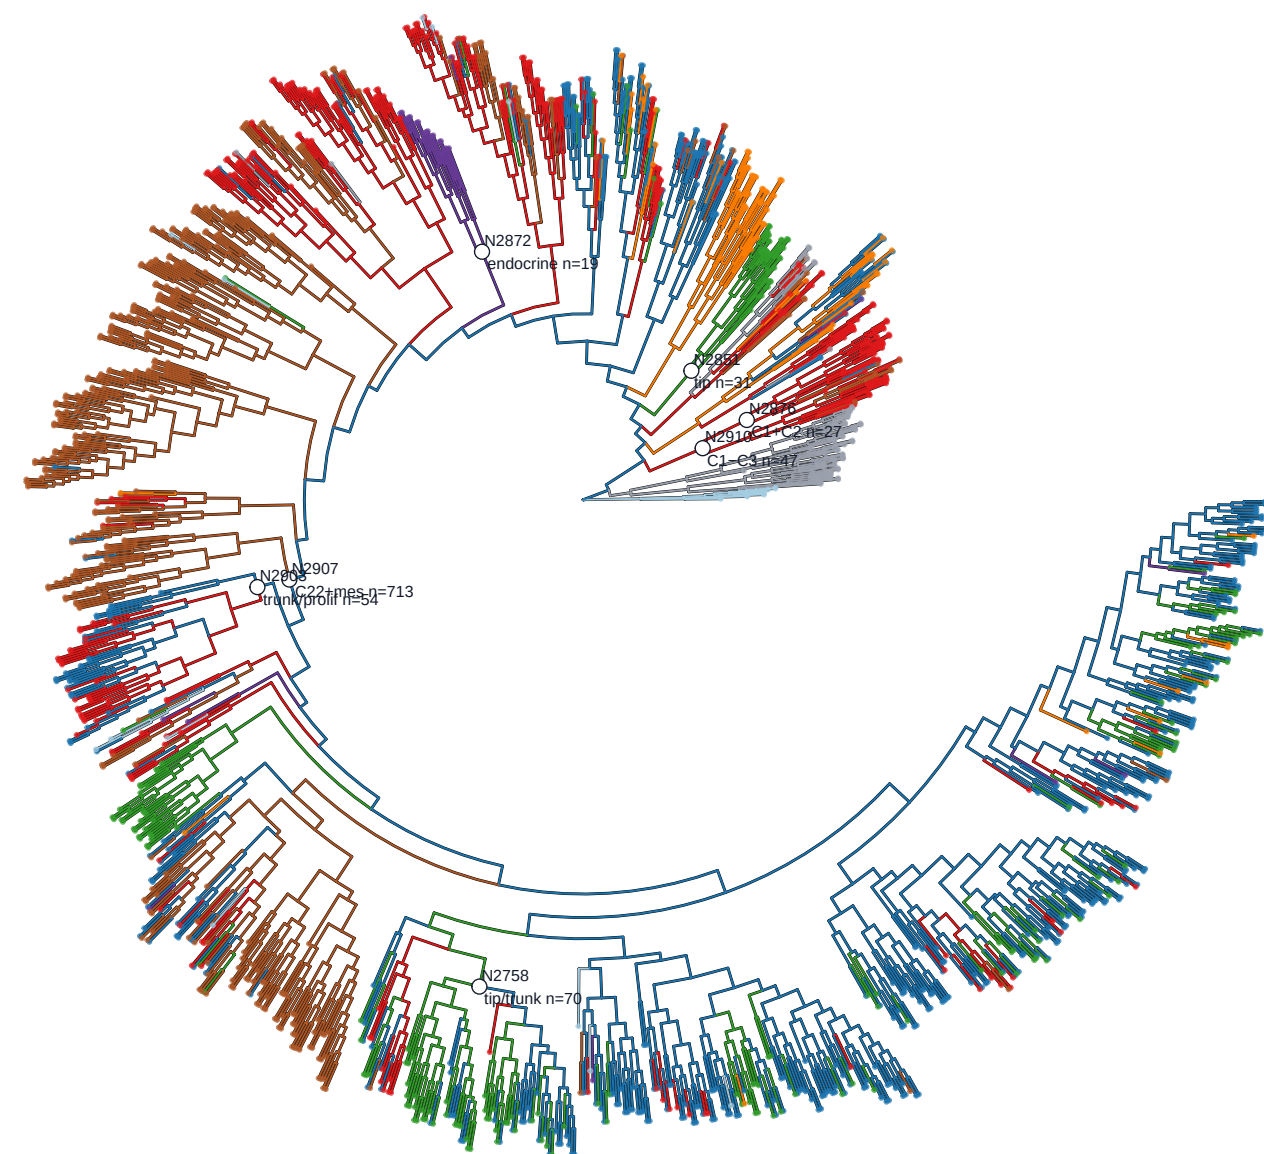

Trunk/tip/prolif fraction

0.00 0.25 0.50 0.75 1.00

Goncalves adaptive-diffusion TBS tree by dominant fetal population

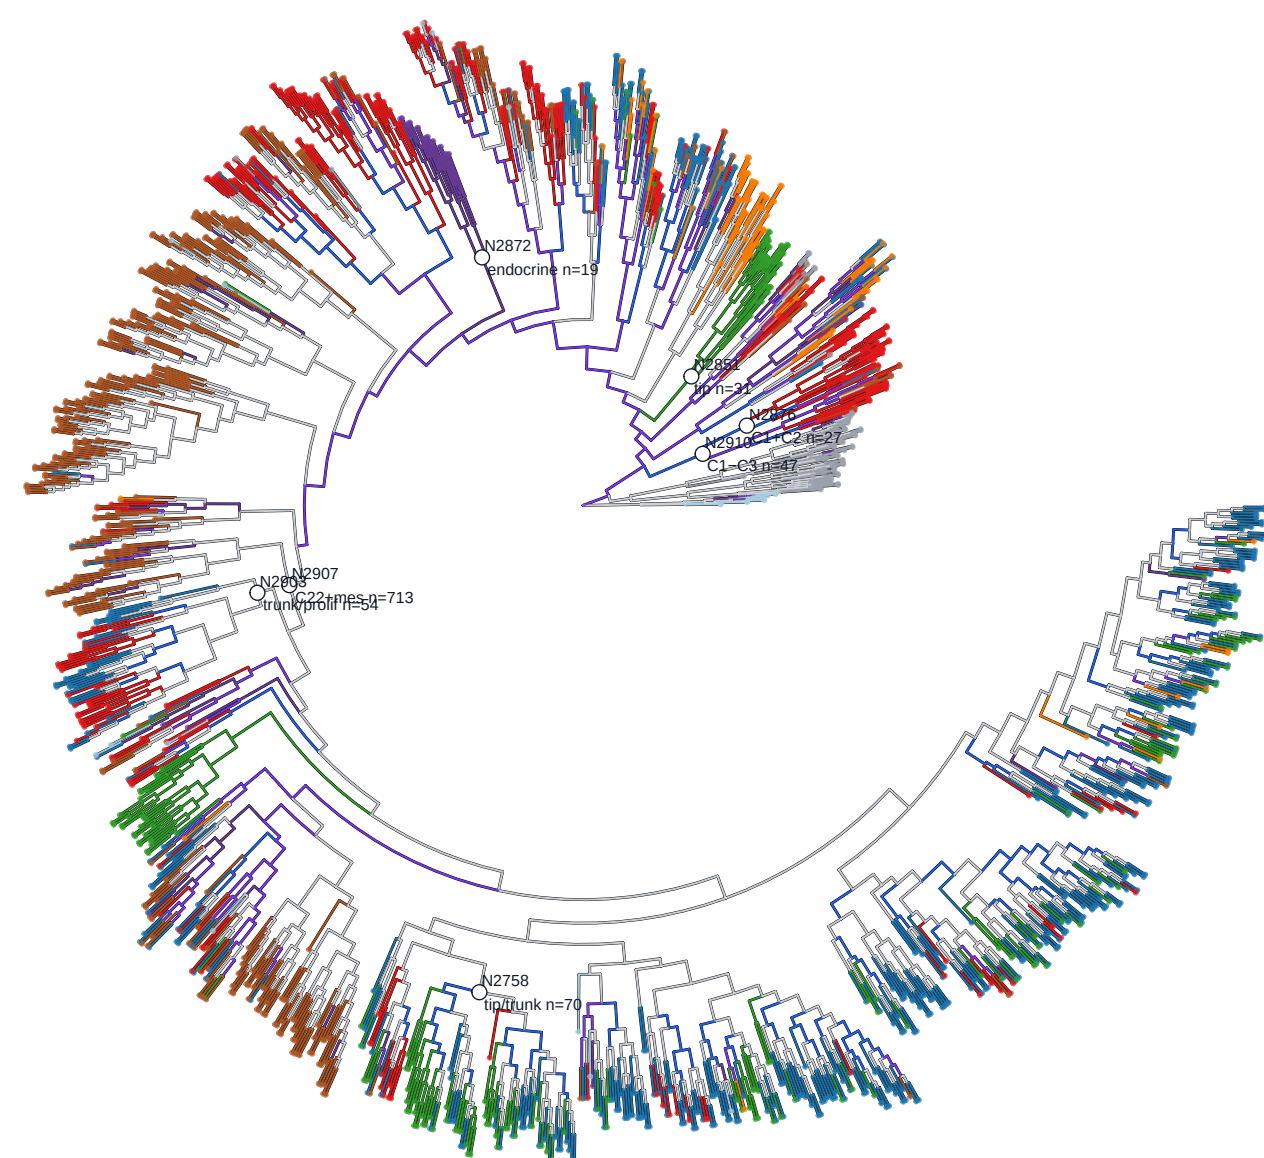

Whole tree; labels mark progenitor/endocrine nodes from the signature analysis

—●— trunk
 —●— proliferating
 —●— mesenchyme
 —●— neurons
—●— tip
 —●— endocrine
 —●— blood
 —●— unknown

Goncalves adaptive-diffusion TBS tree by progenitor interpretation

Internal branches use marker/population interpretation; terminal cells use their population label

— tip progenitor — partial progenitor — tip cell — blood — other
— proliferating progenitor — endocrine — proliferating cell — neurons
— mixed fetal progenitor — trunk cell — mesenchyme — unknown
