

Goncalves fetal pancreas TBS UMAPs and full radial trees

Each row uses the same colors in UMAP and tree for every final TBS cluster. Labels are shown only for larger clusters; shared tree ancestors are grey.

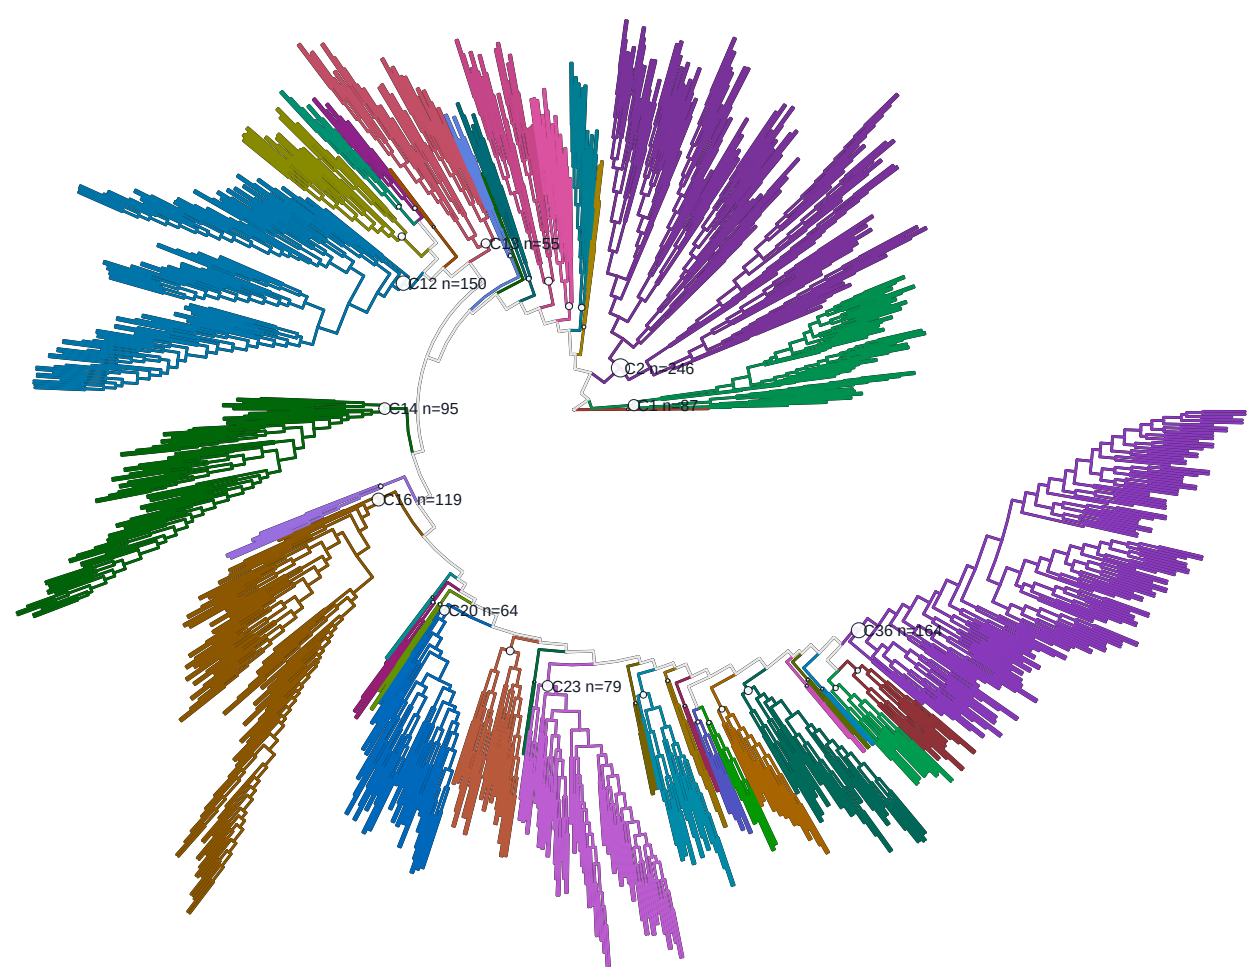

Topology-only TBS UMAP

40 total clusters; 9 clusters >= 50 cells labeled

Topology-only TBS full radial tree

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 50 100 150 200

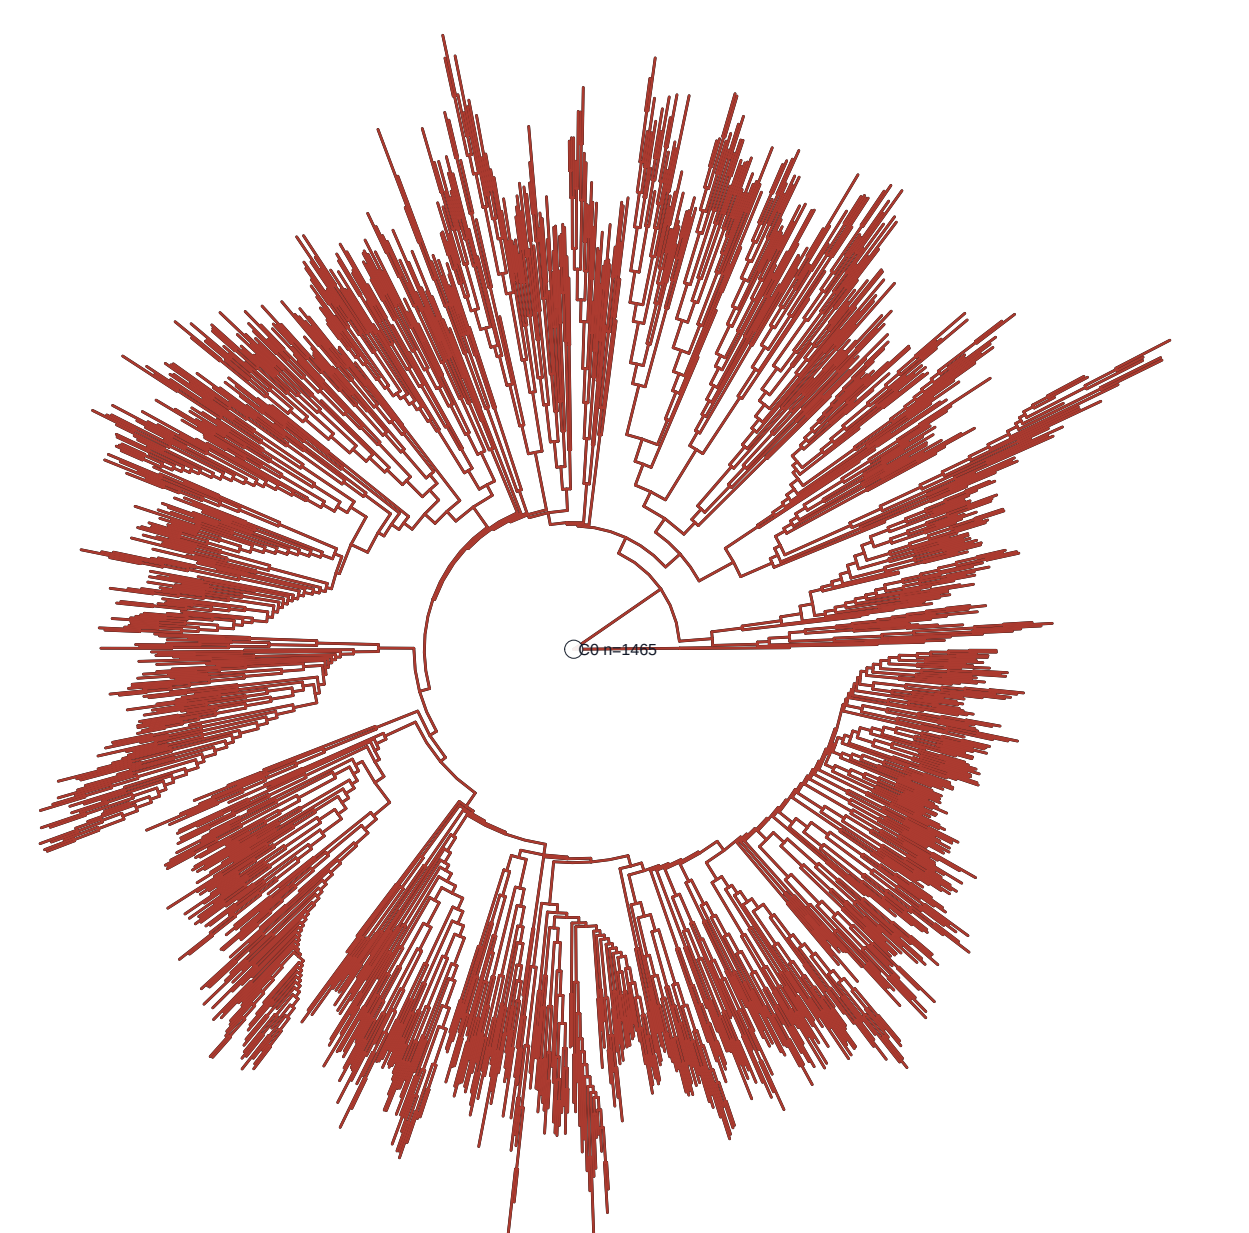

Recomputed NNLS branch-time TBS UMAP

1 total clusters; 1 clusters >= 50 cells labeled

Recomputed NNLS branch-time TBS full radial tree

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 1465

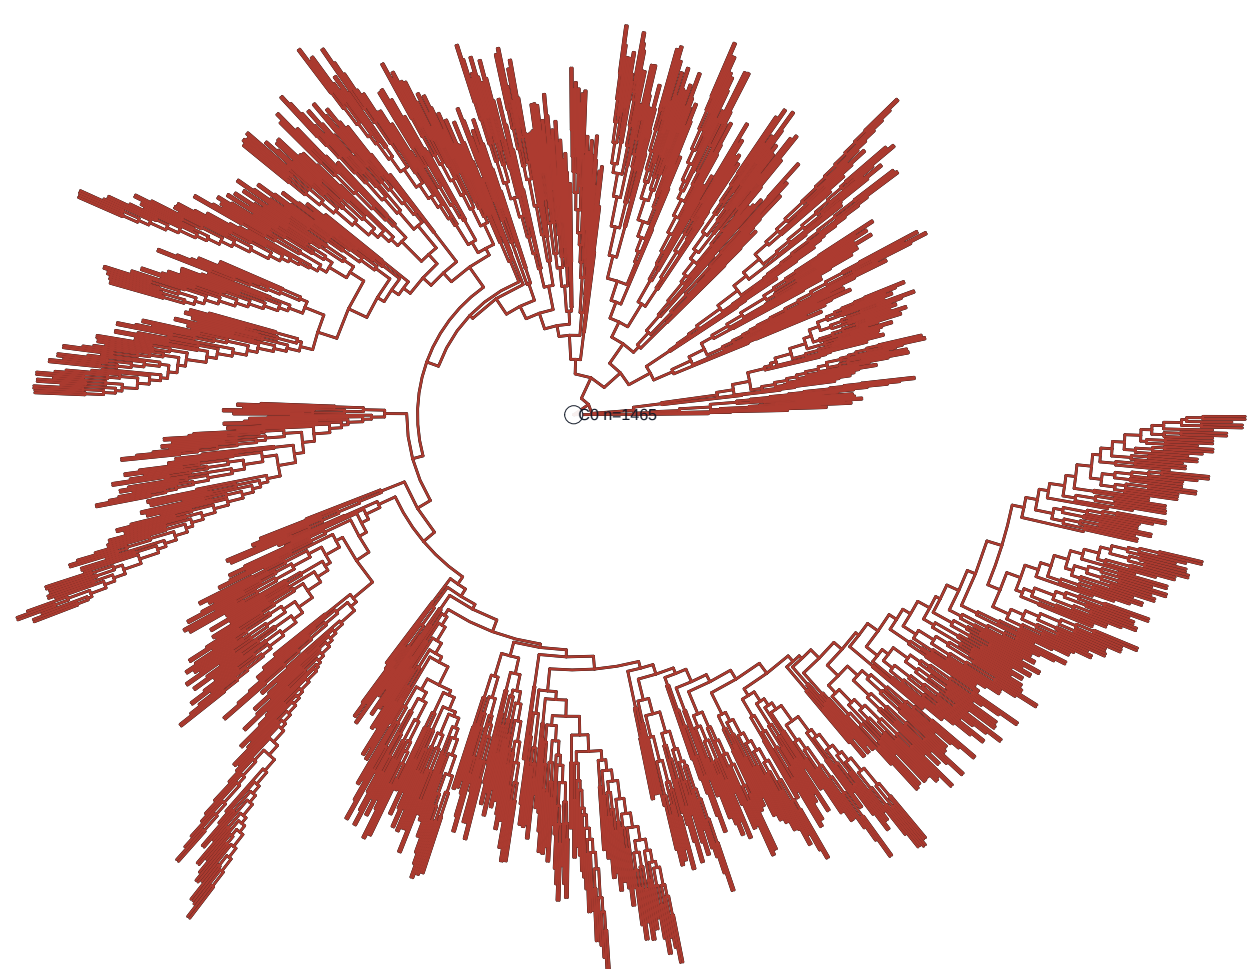

Raw-linkage branch-time diagnostic TBS UMAP

1 total clusters; 1 clusters >= 50 cells labeled

Raw-linkage branch-time diagnostic TBS full radial tree

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 1465

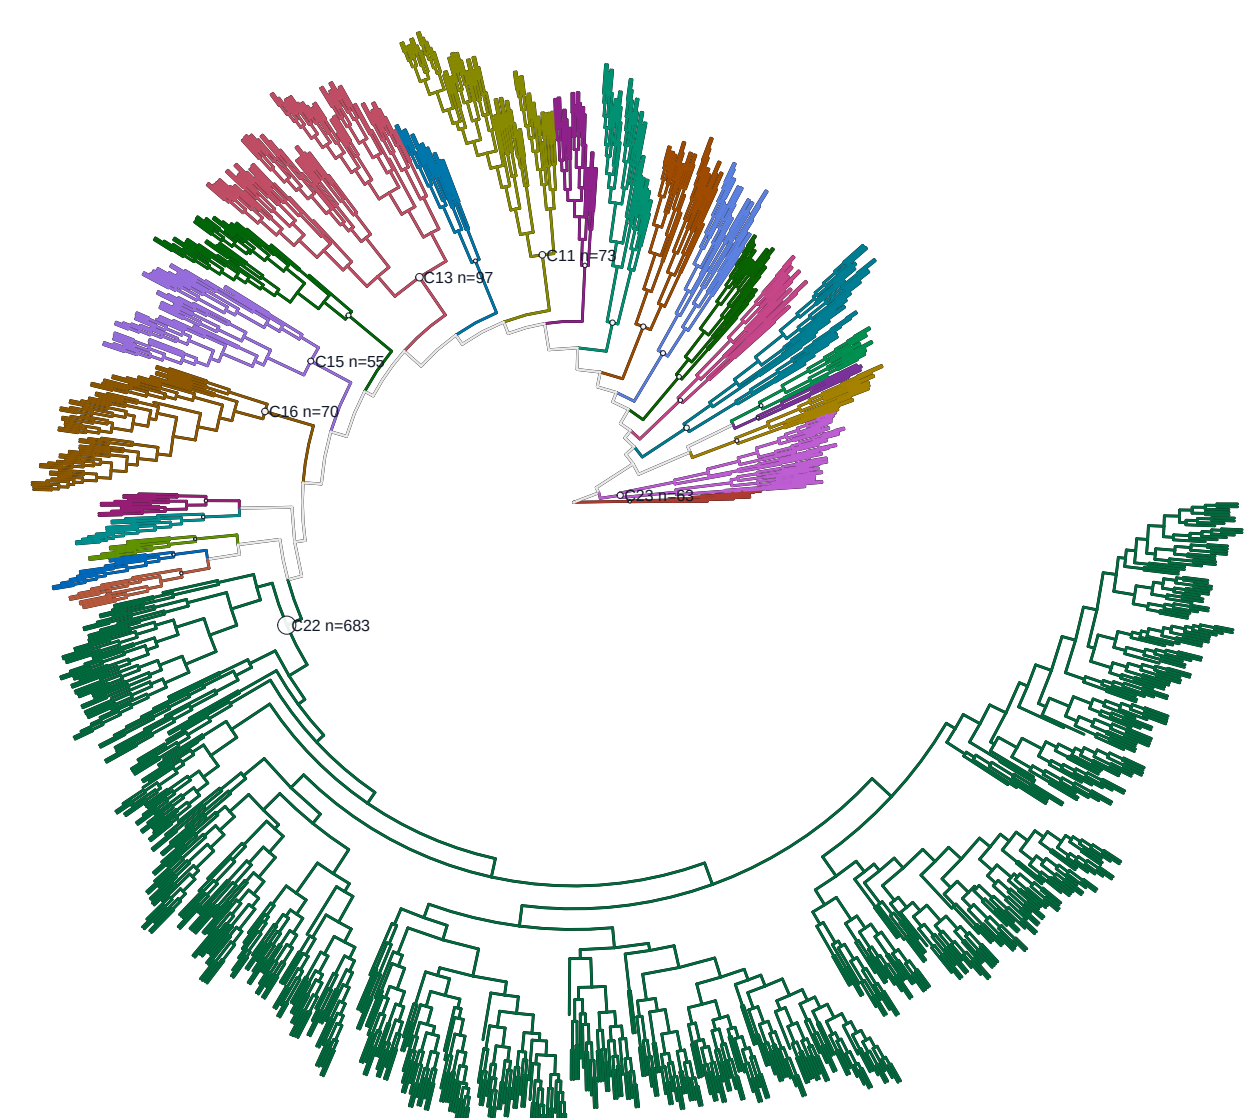

Adaptive diffusion topology TBS UMAP

24 total clusters; 6 clusters >= 50 cells labeled

Adaptive diffusion topology TBS full radial tree

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 200 400 600

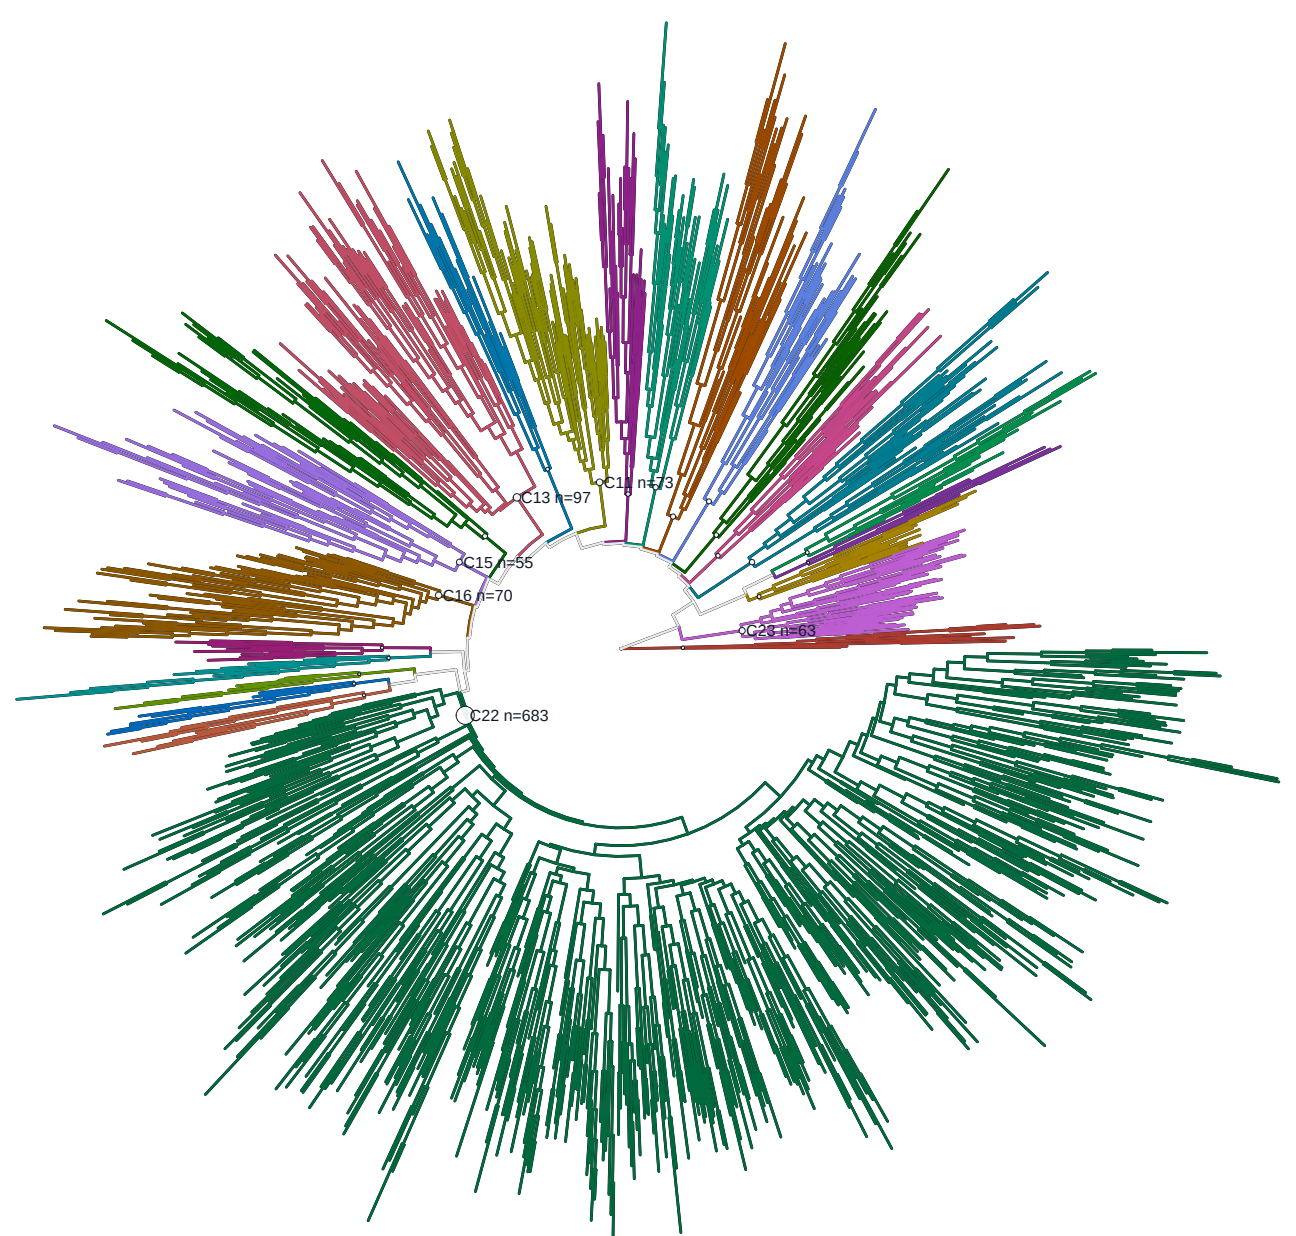

Adaptive diffusion recomputed NNLS branch-time TBS UMAP

24 total clusters; 6 clusters >= 50 cells labeled

Adaptive diffusion recomputed NNLS branch-time TBS full radial tree

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 200 400 600

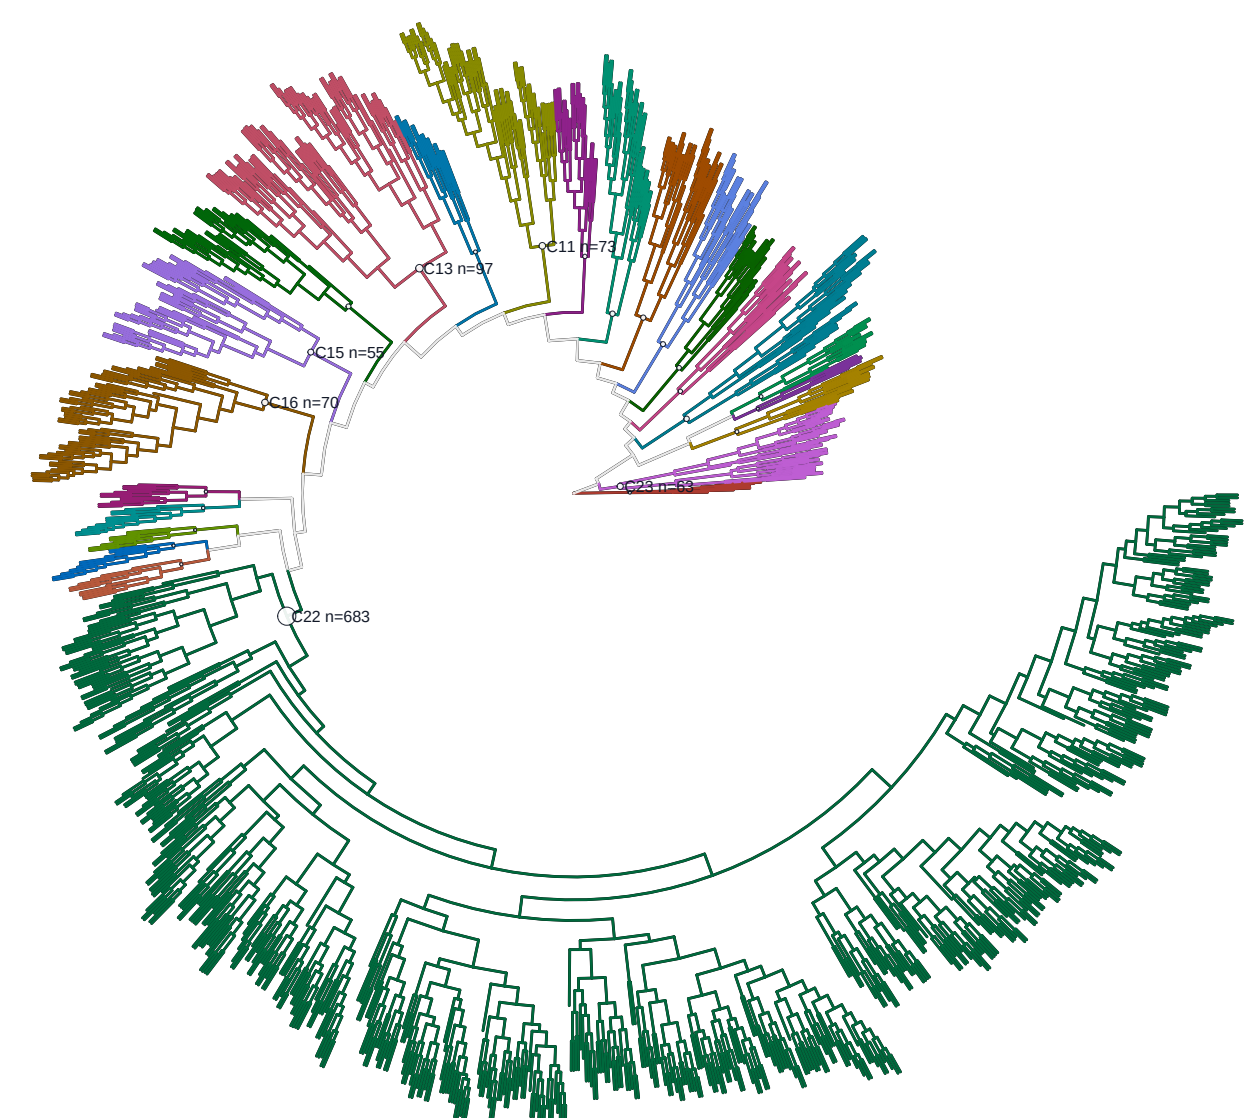

Adaptive diffusion raw-linkage branch-time diagnostic TBS UMAP

24 total clusters; 6 clusters >= 50 cells labeled

Adaptive diffusion raw-linkage branch-time diagnostic TBS full radial tree

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 200 400 600
