

Pancreas TBS UMAPs and full radial trees

Each row uses the same colors in UMAP and tree for every final TBS cluster. Labels are shown only for larger clusters; shared tree ancestors are grey.

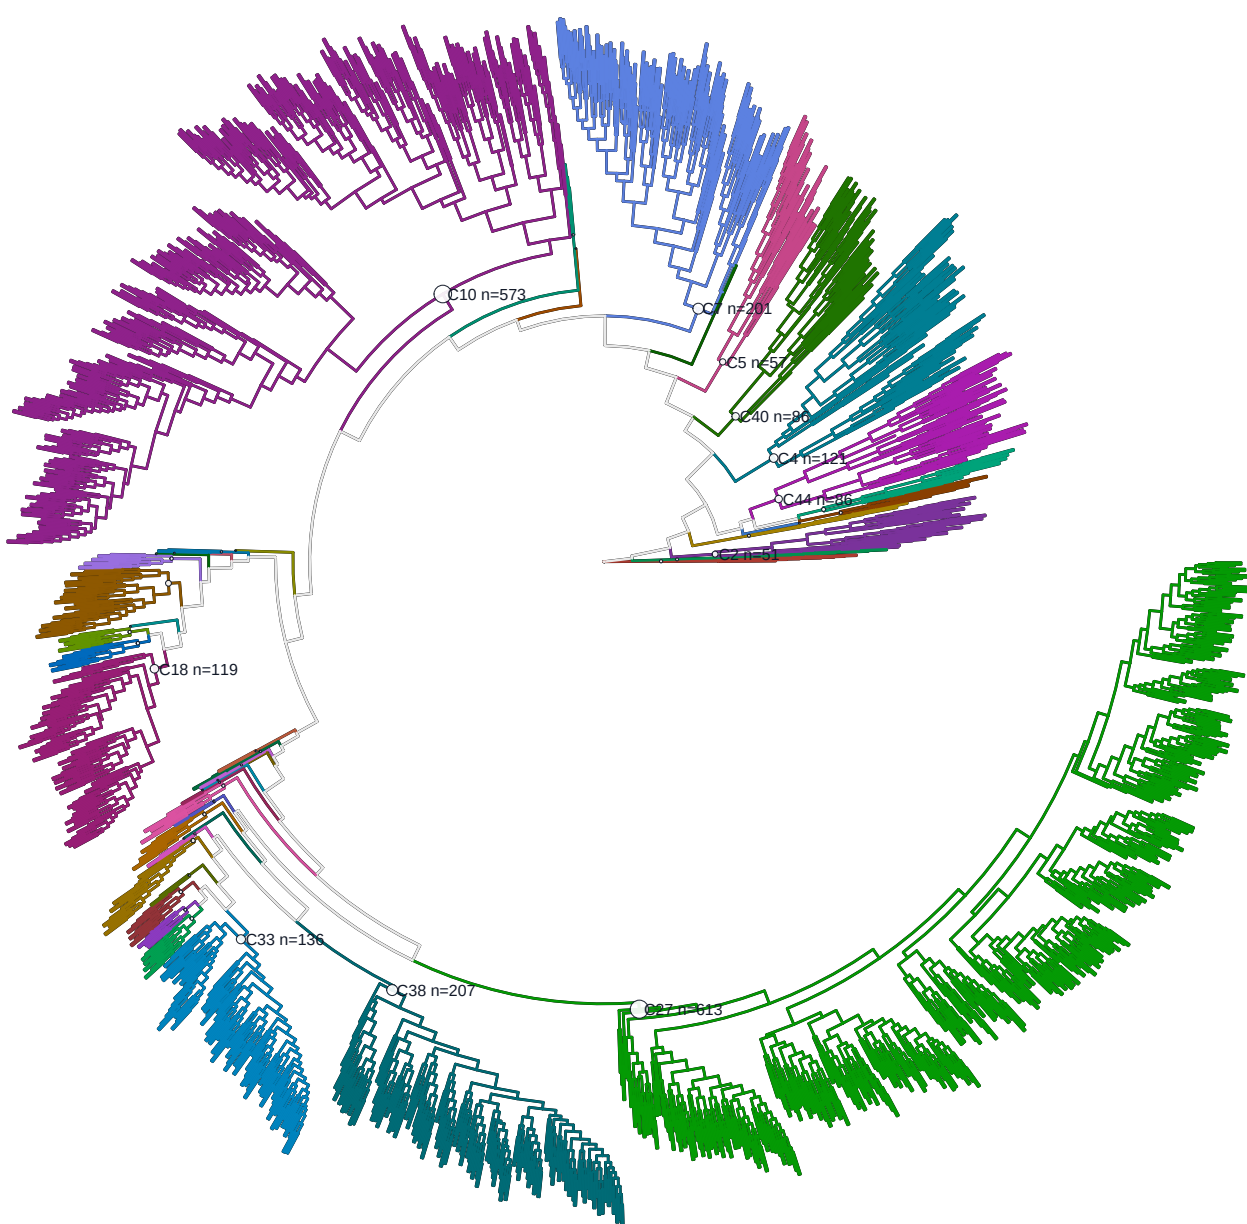

Topology-only TBS UMAP

45 total clusters; 11 clusters >= 50 cells labeled

Topology-only TBS full radial tree

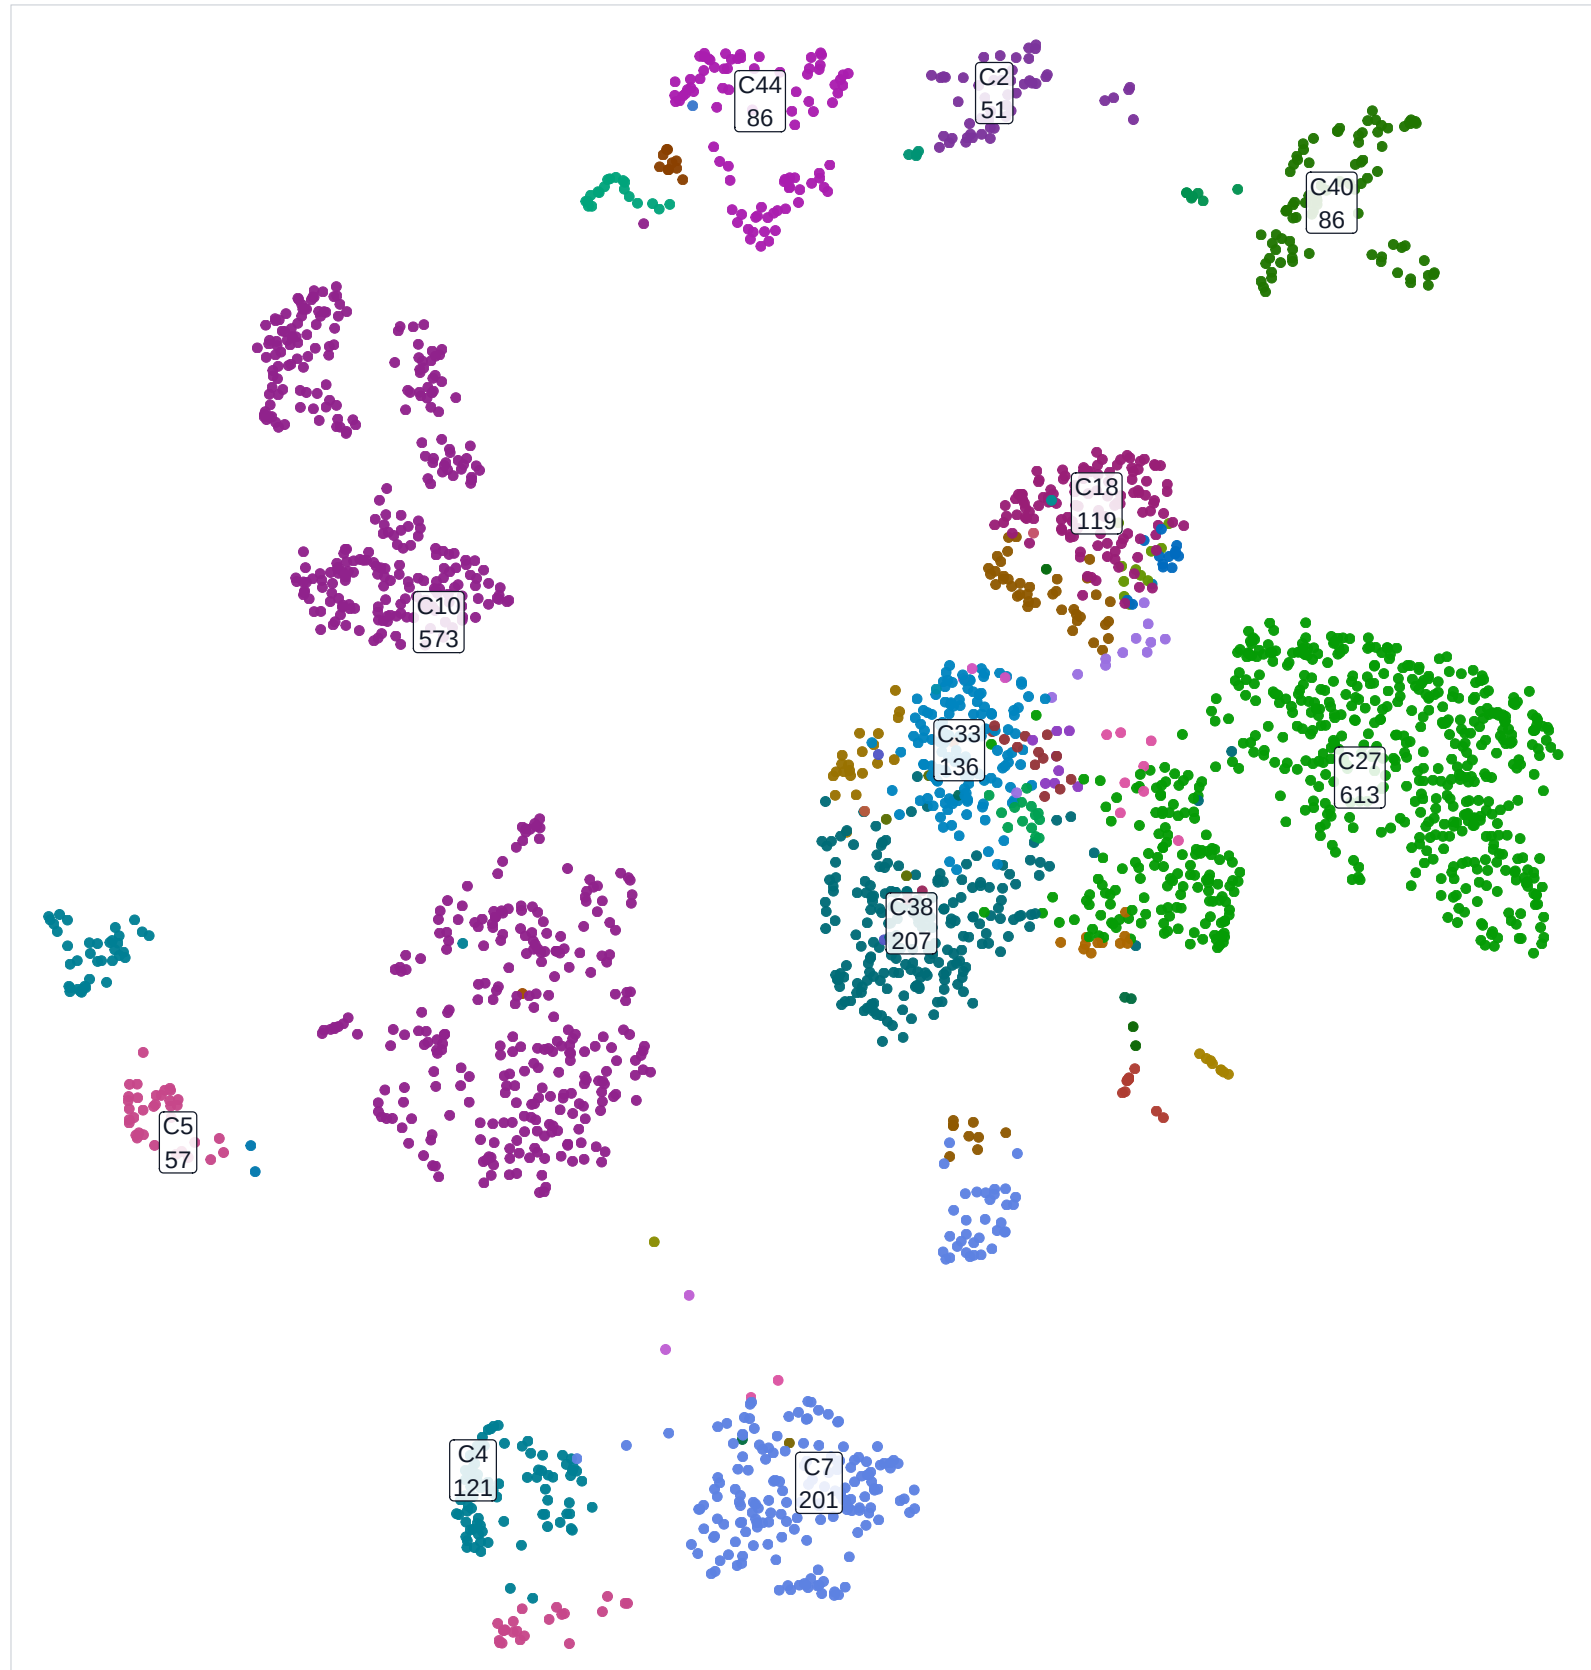

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 200 400 600

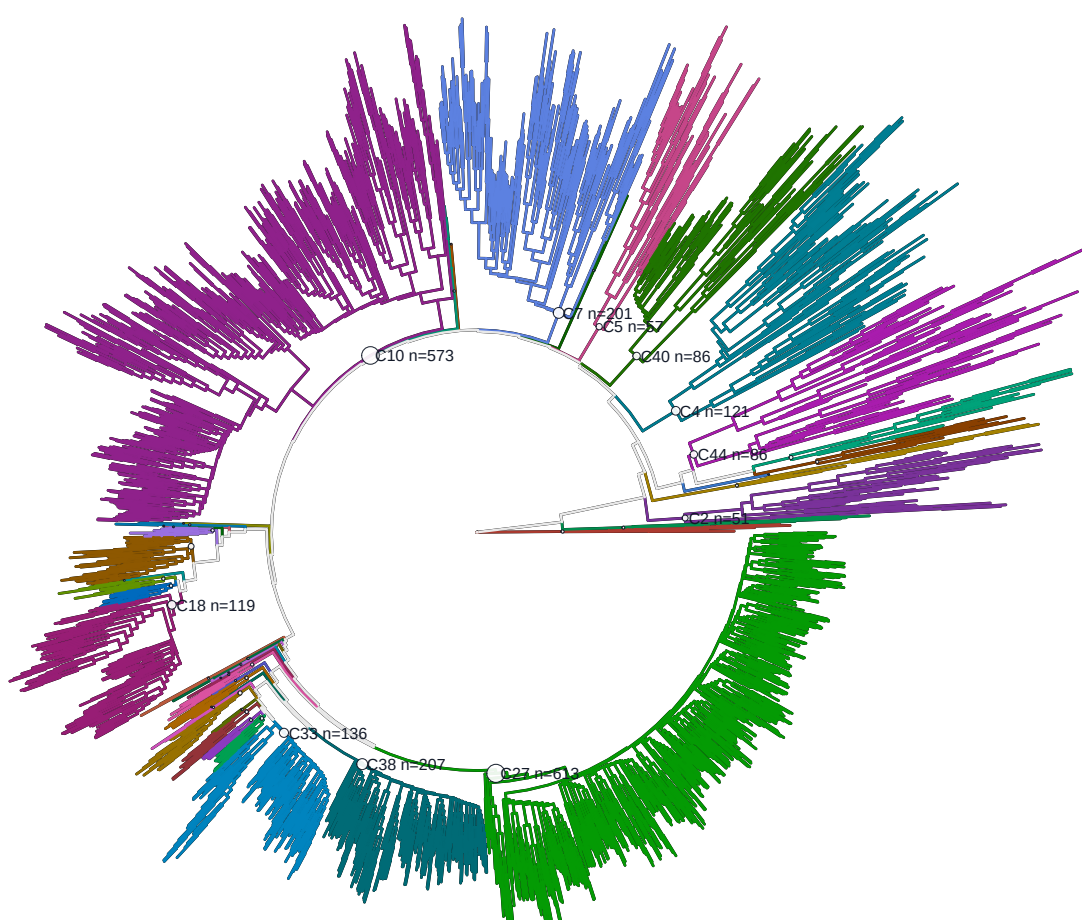

Recomputed NNLS branch-time TBS UMAP

45 total clusters; 11 clusters >= 50 cells labeled

Recomputed NNLS branch-time TBS full radial tree

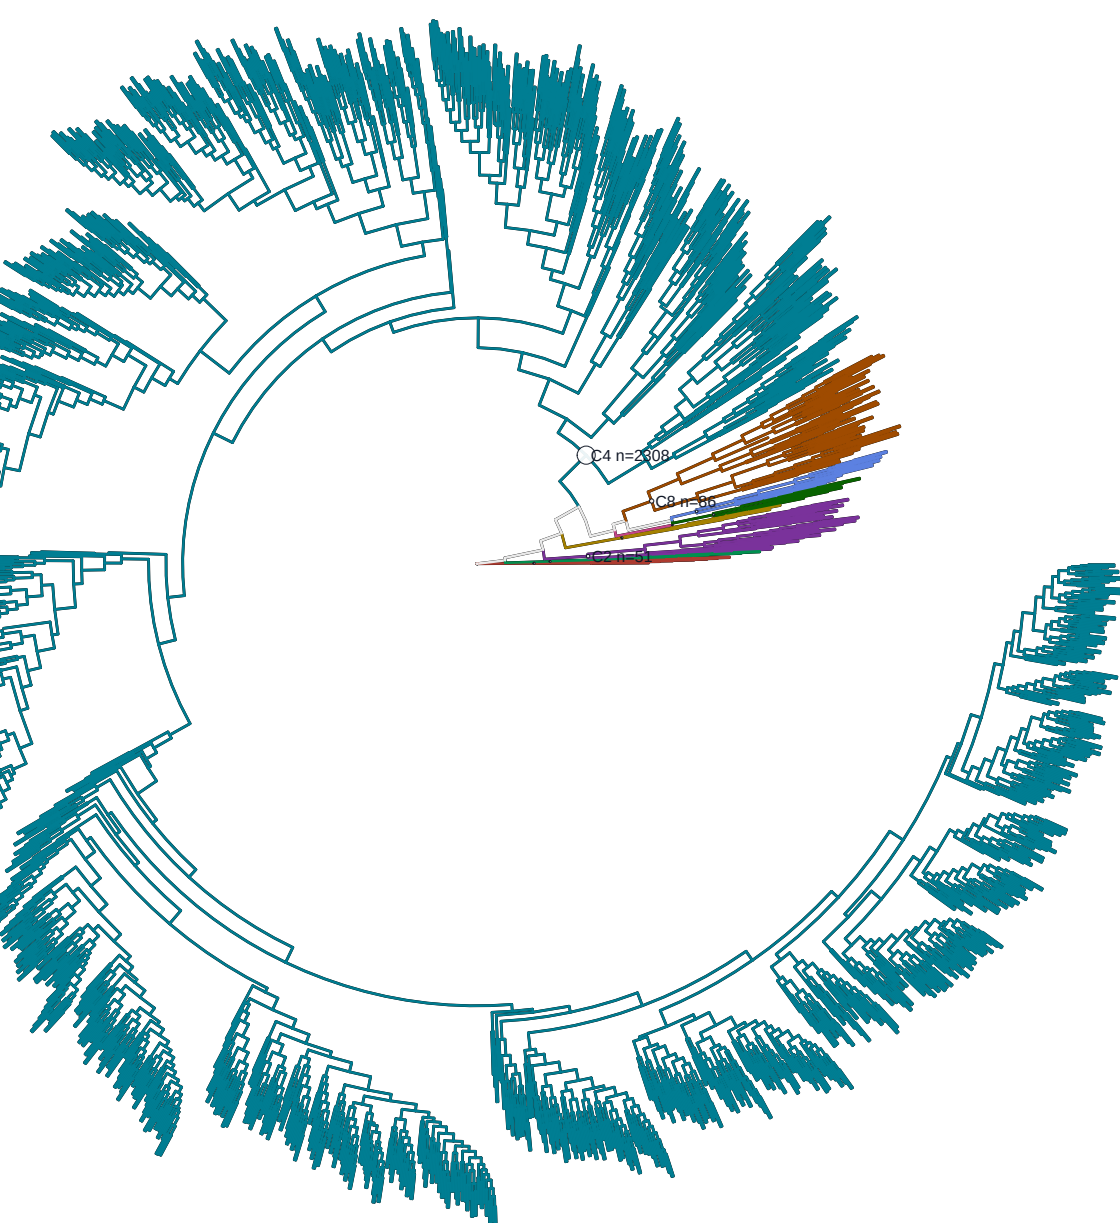

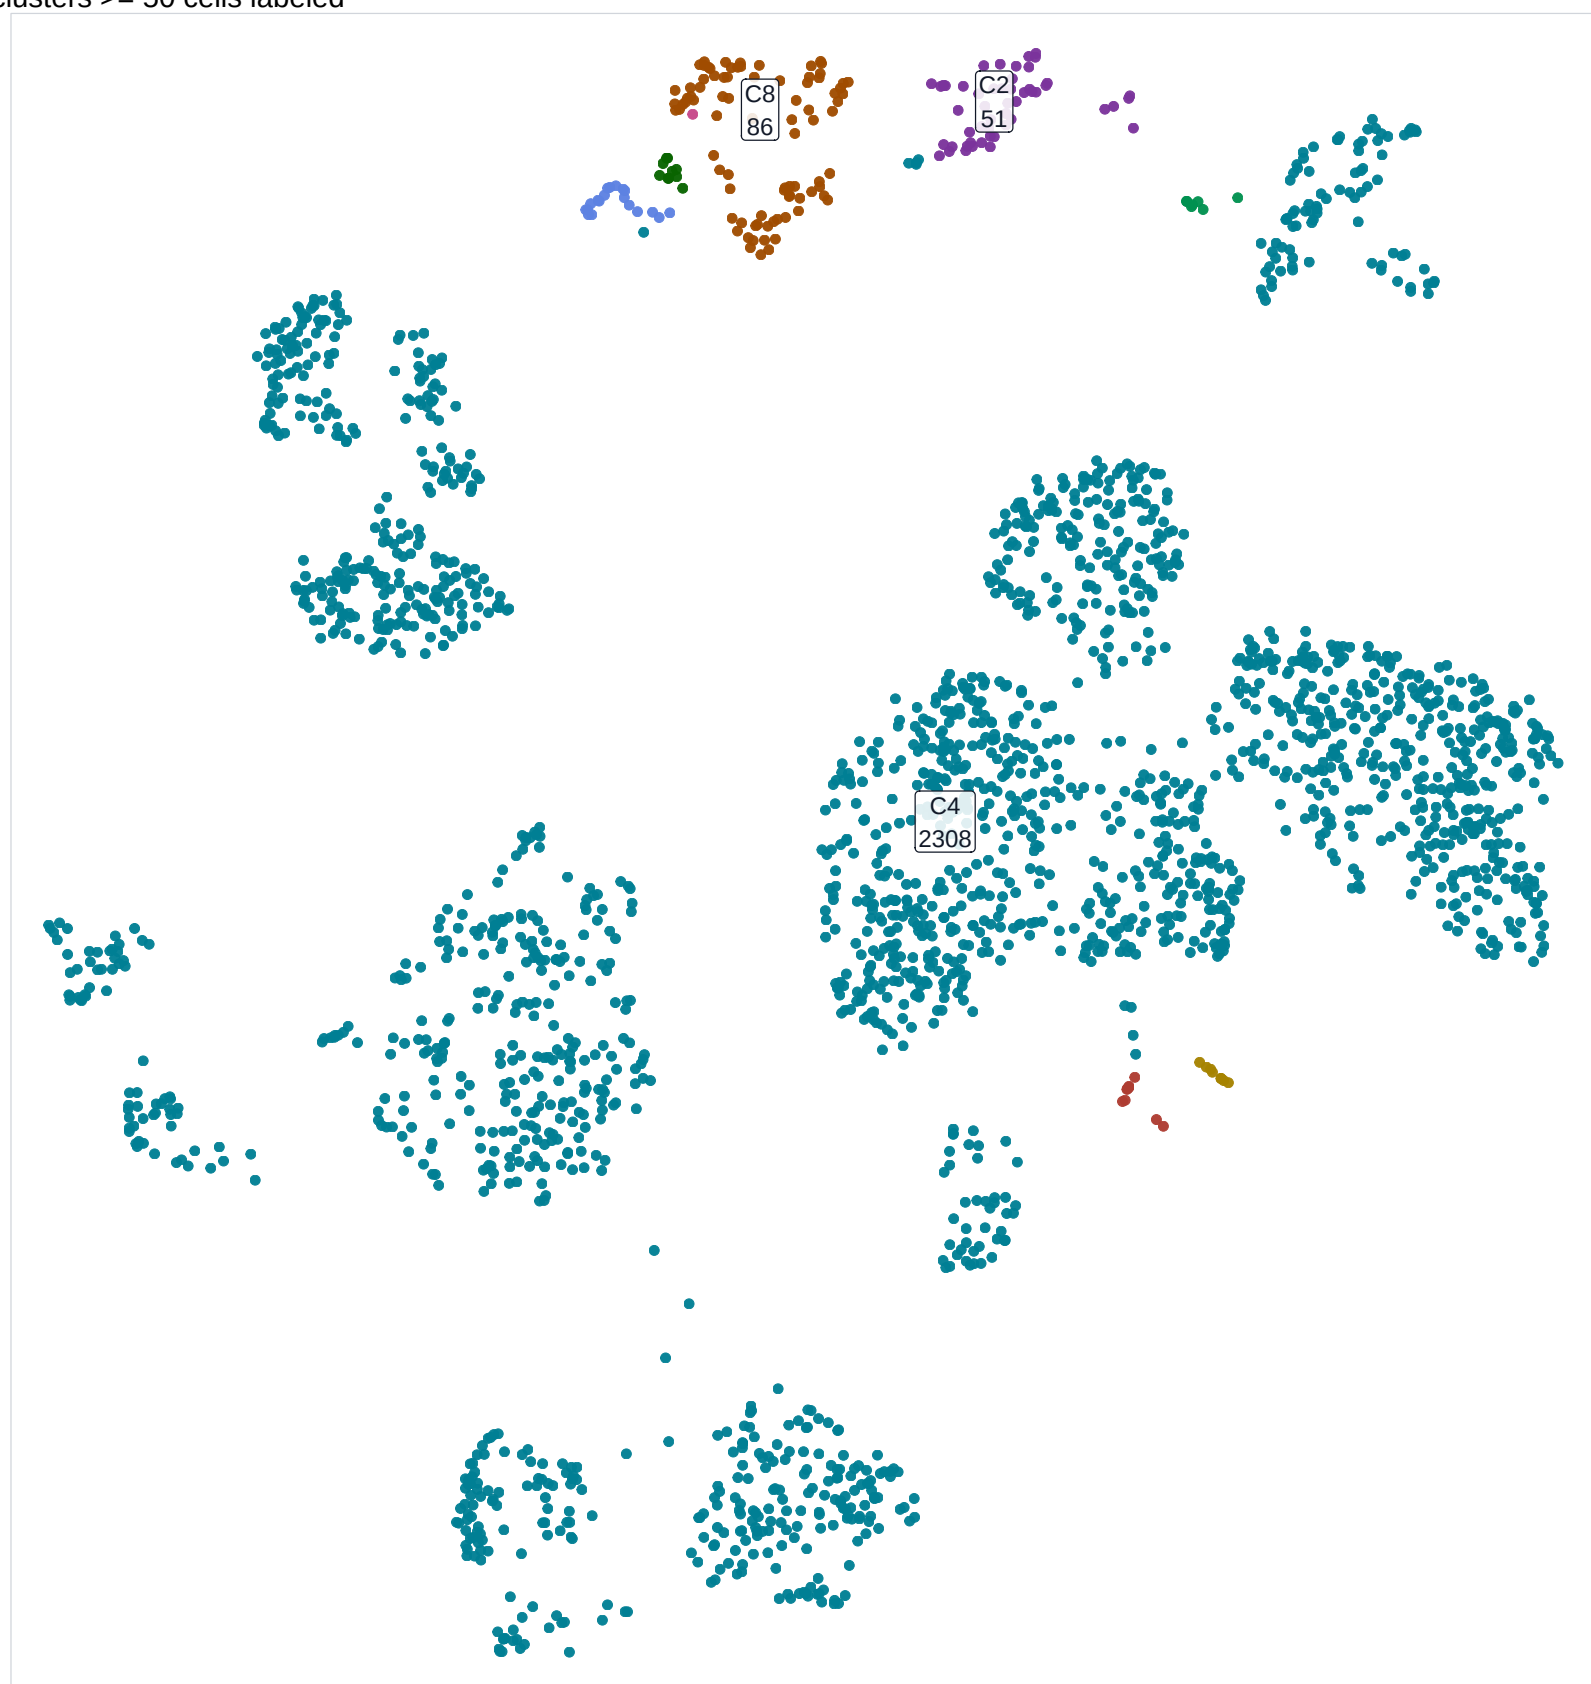

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 200 400 600

Raw-linkage branch-time diagnostic TBS UMAP

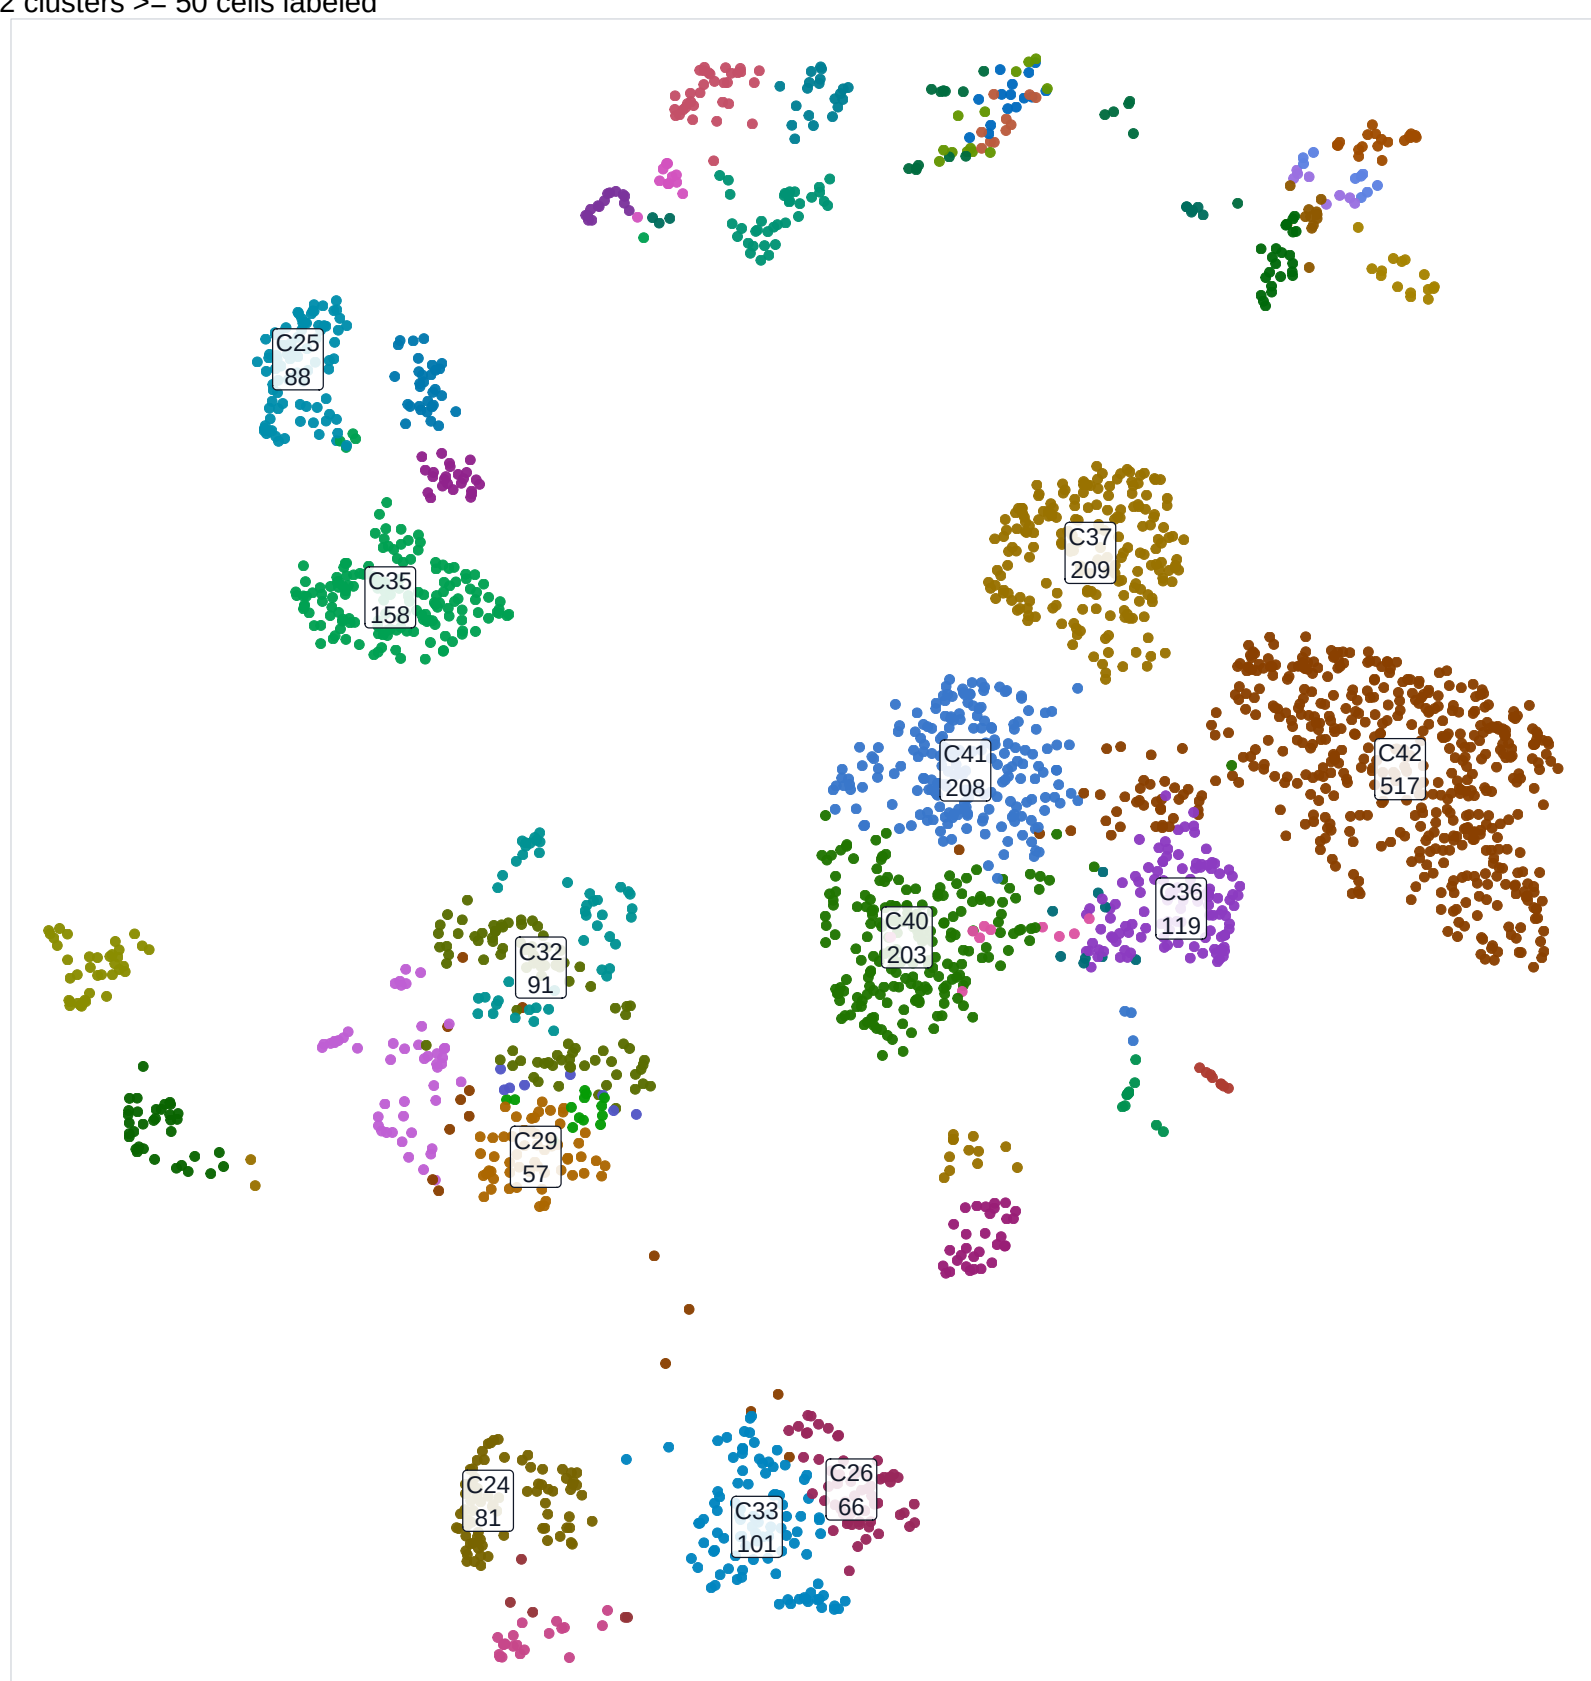

9 total clusters; 3 clusters >= 50 cells labeled

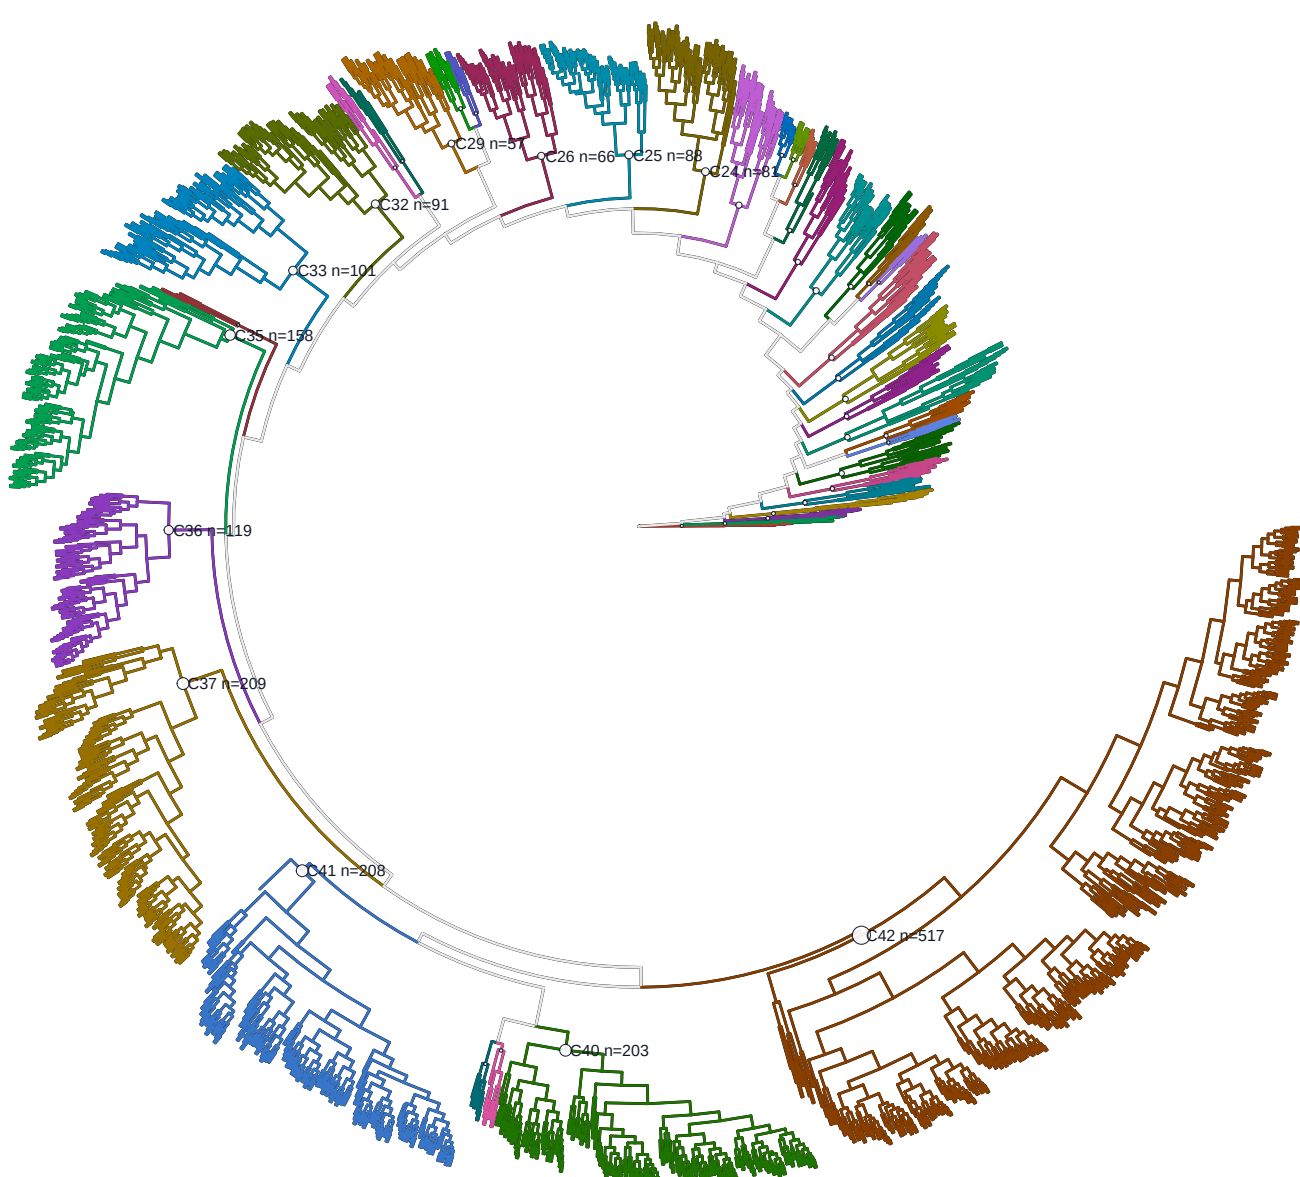

Cluster size 500 1000 1500 2000

Adaptive diffusion topology TBS UMAP

43 total clusters; 12 clusters >= 50 cells labeled

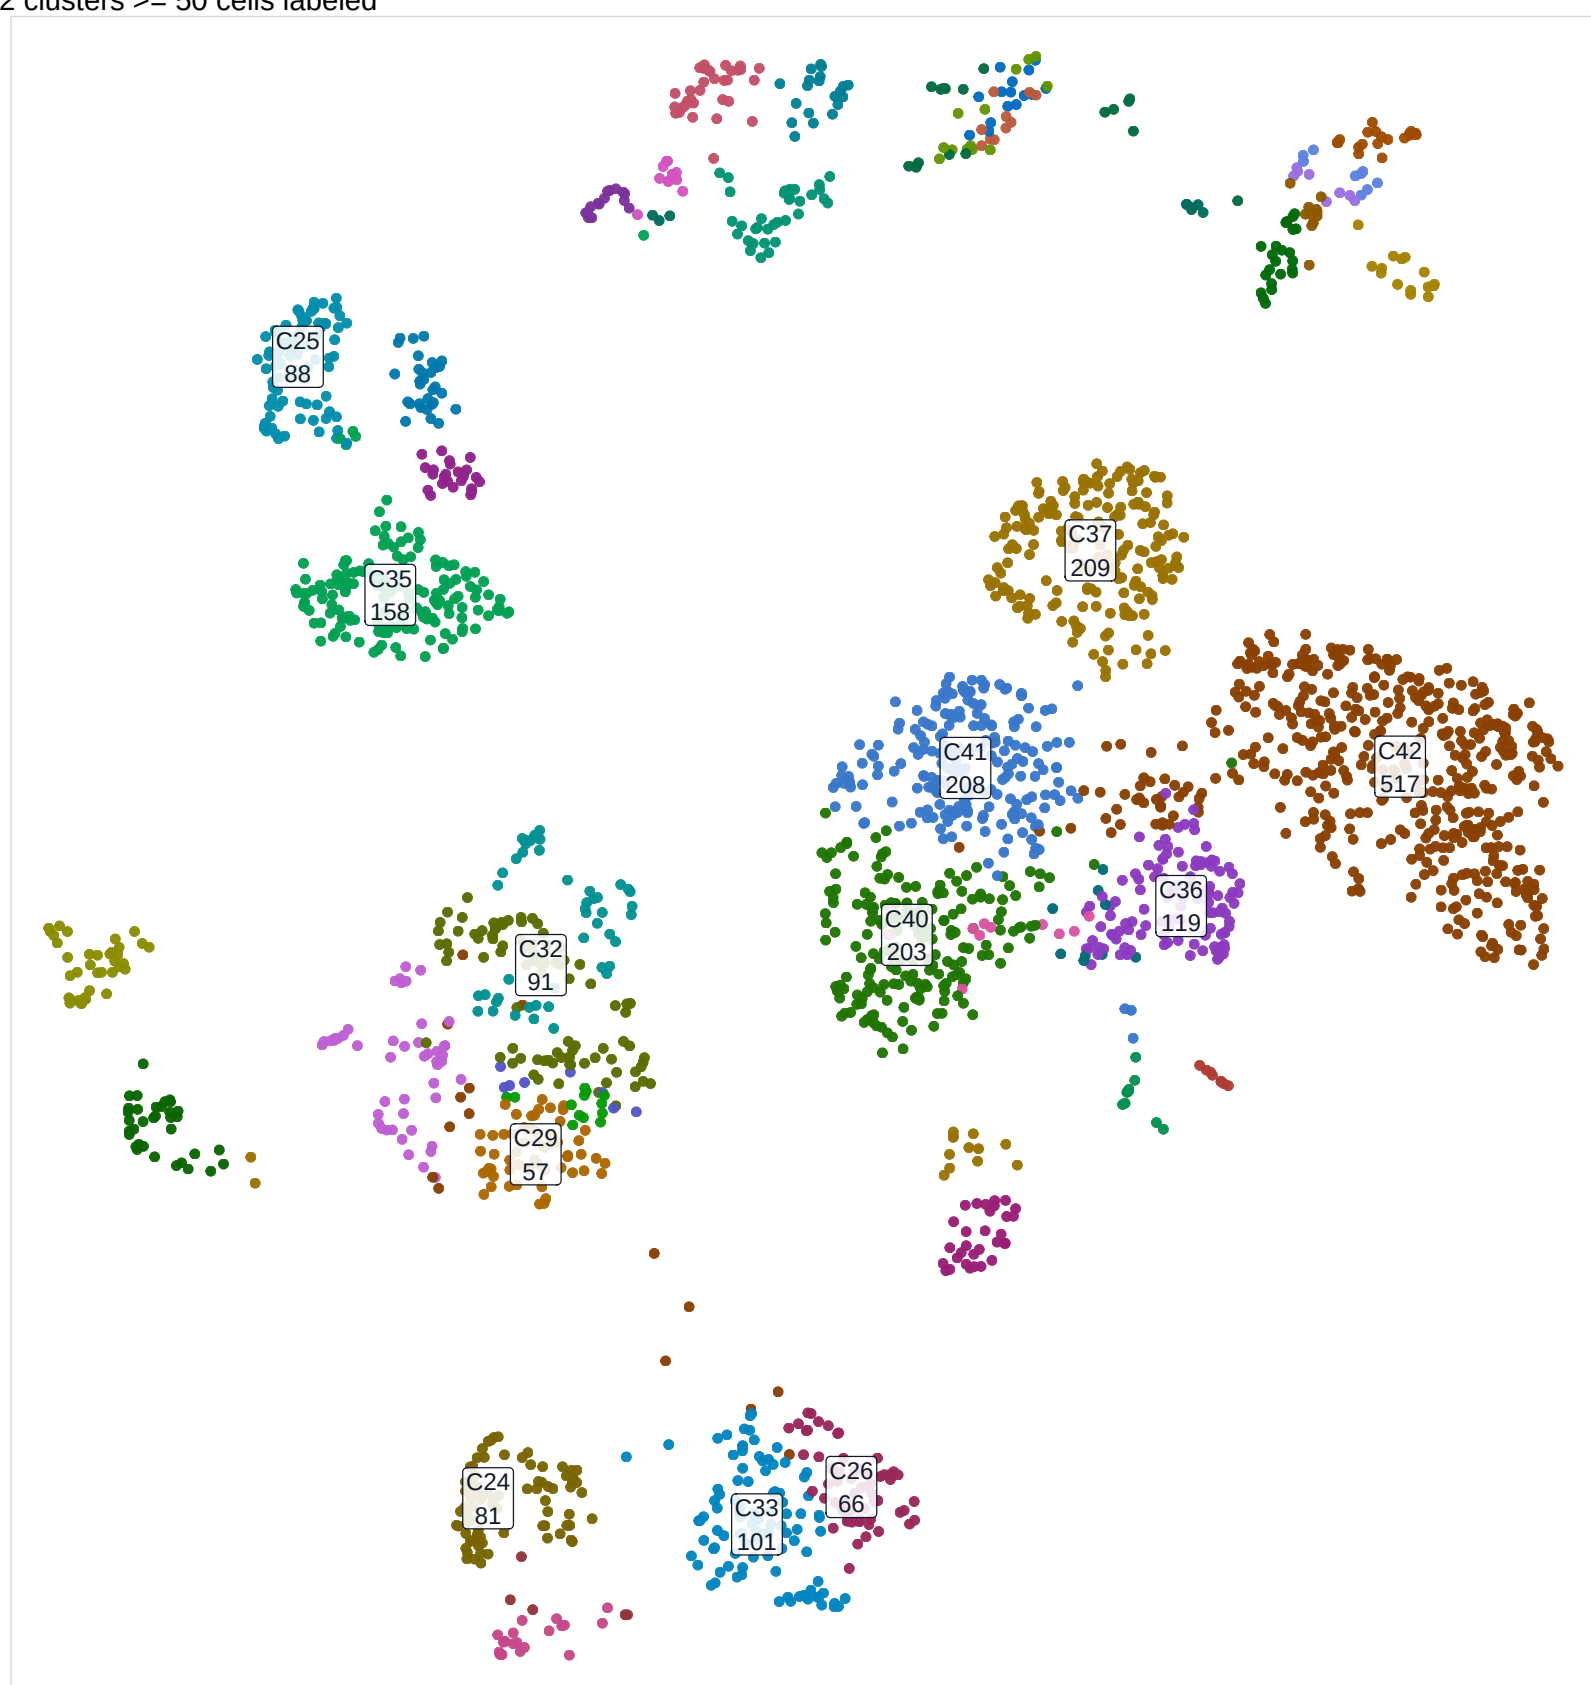

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

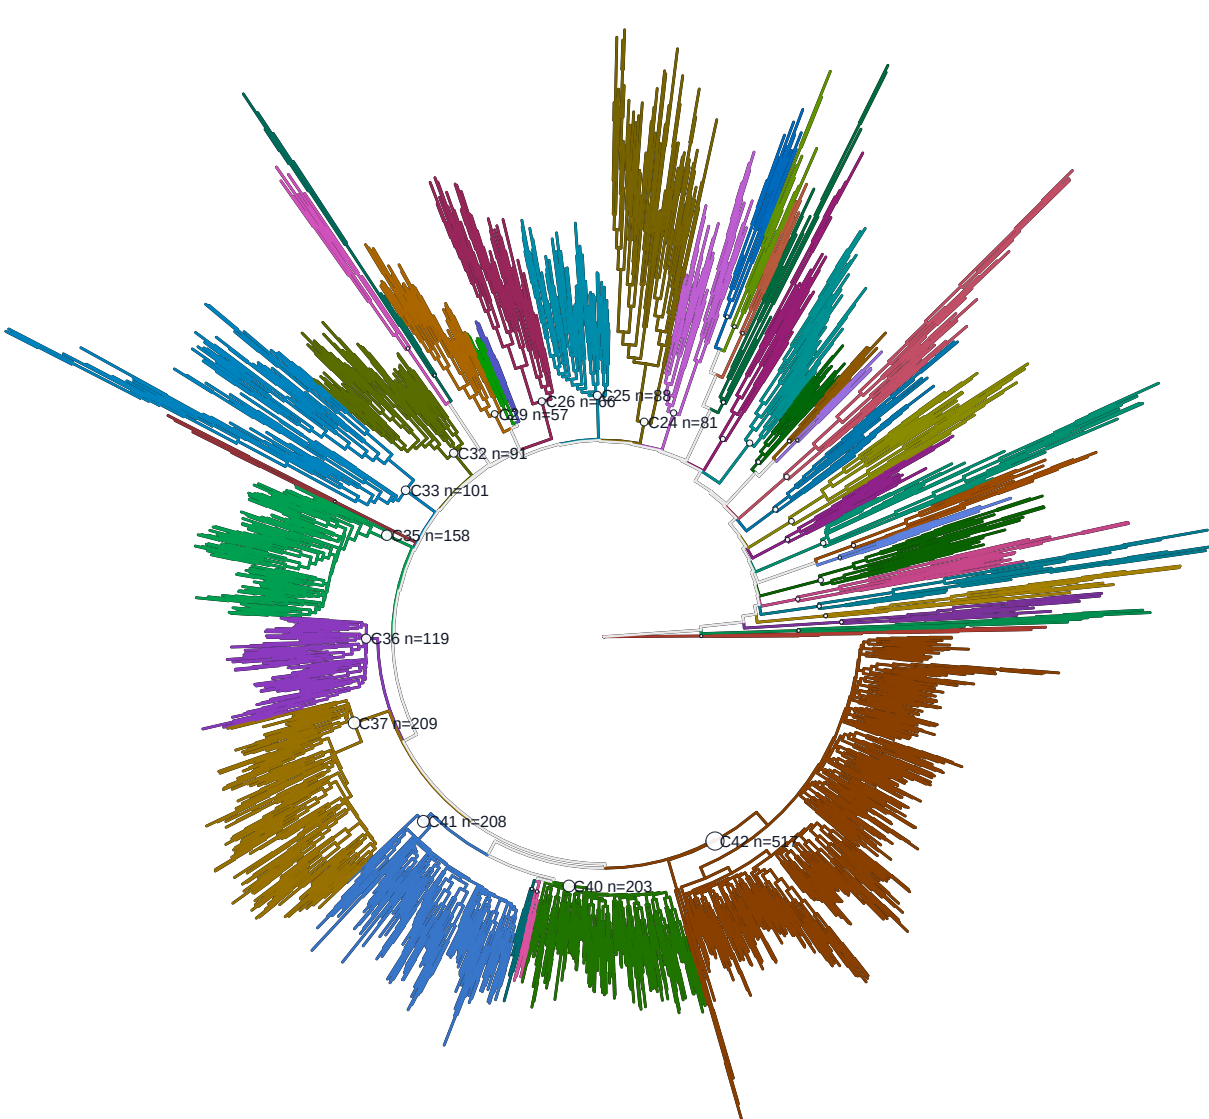

Cluster size 100 200 300 400 500

Adaptive diffusion recomputed NNLS branch-time TBS UMAP

43 total clusters; 12 clusters >= 50 cells labeled

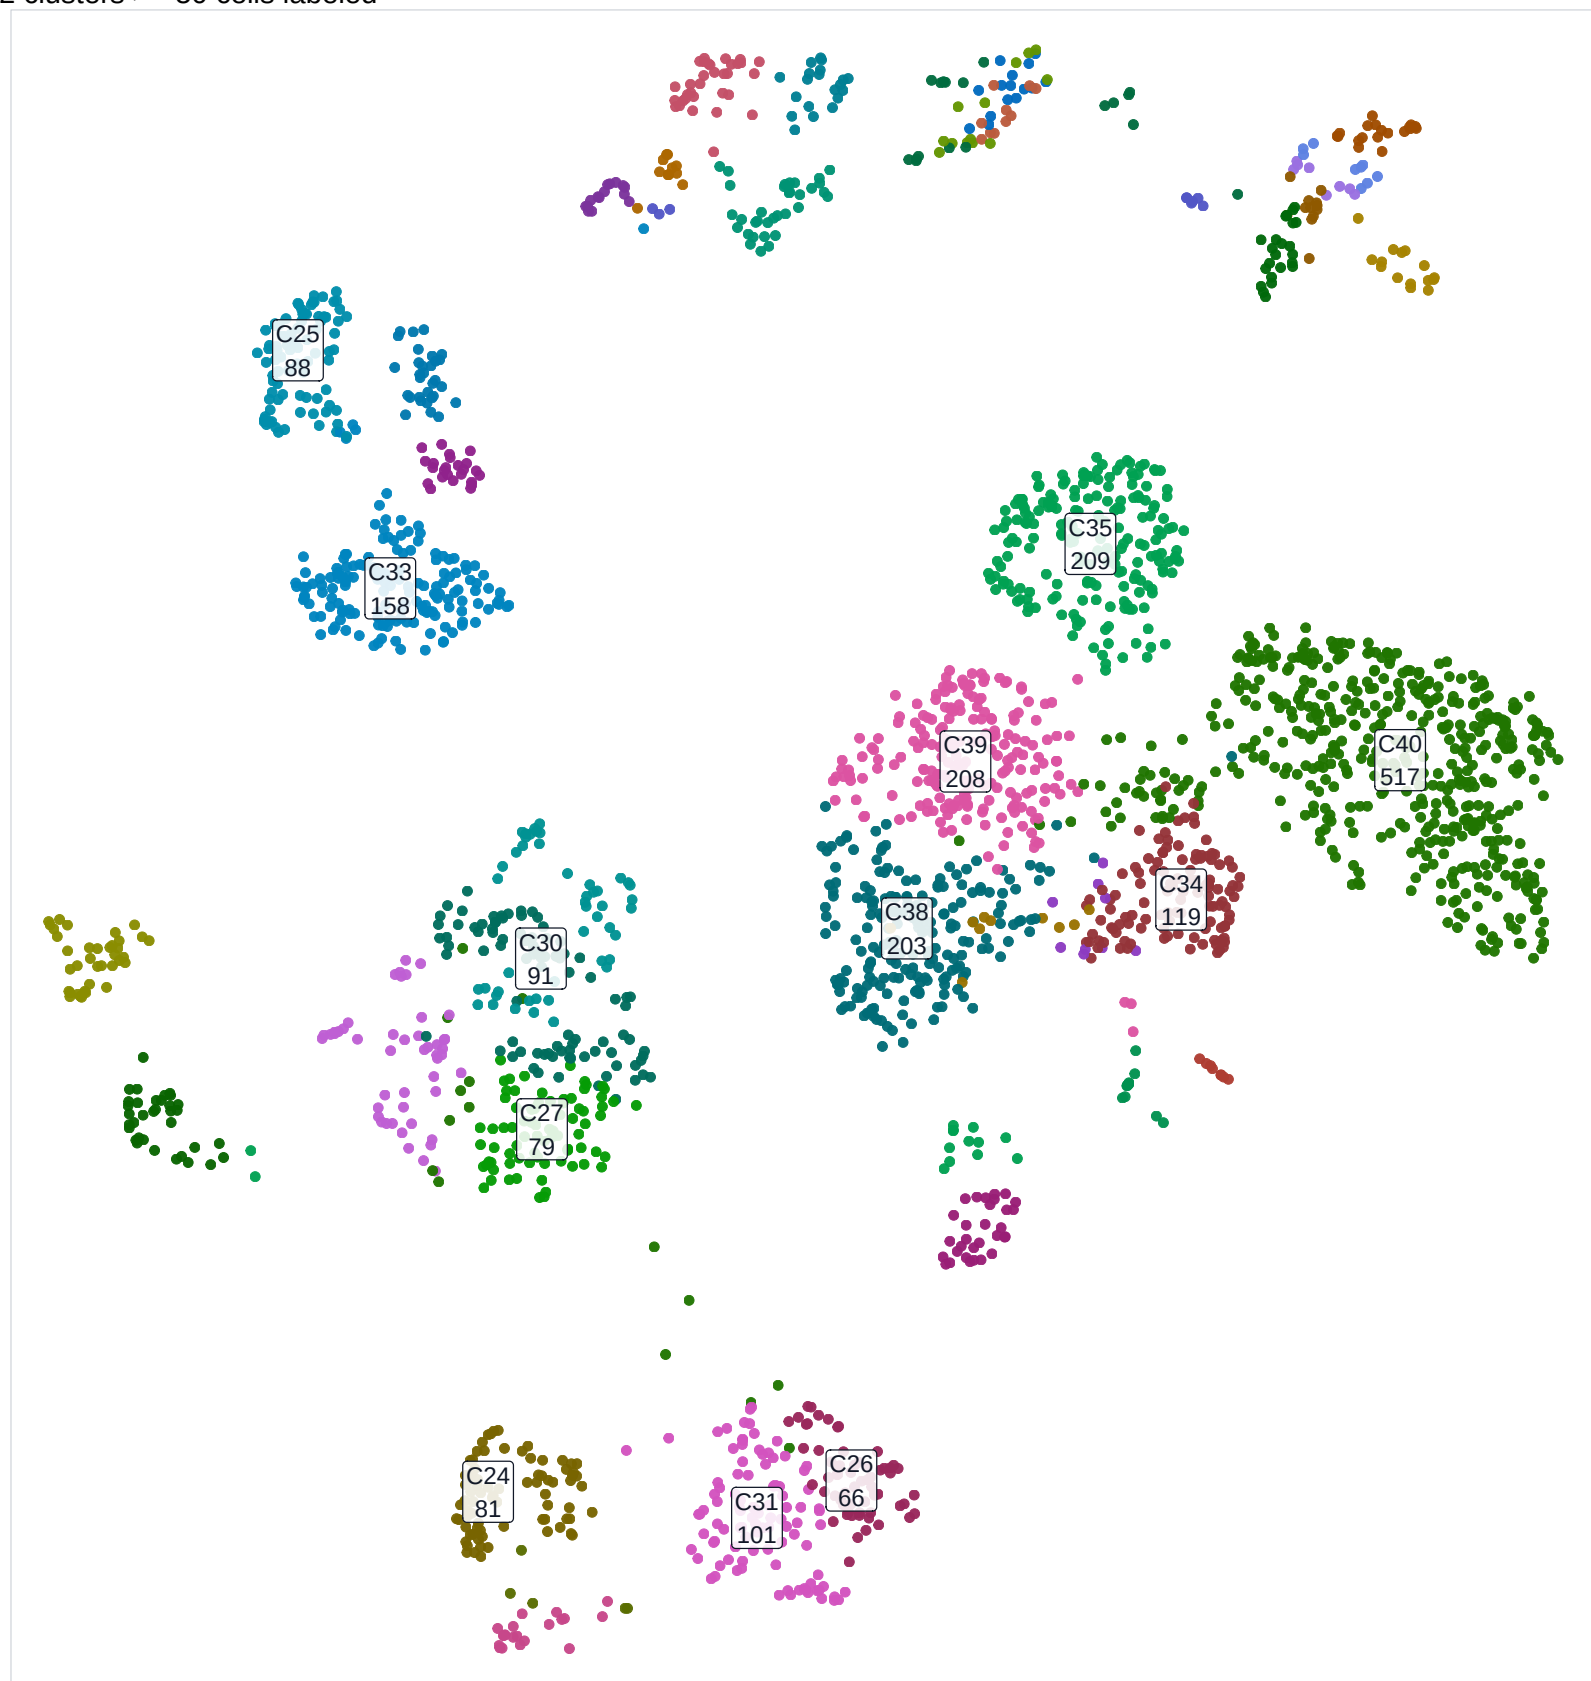

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

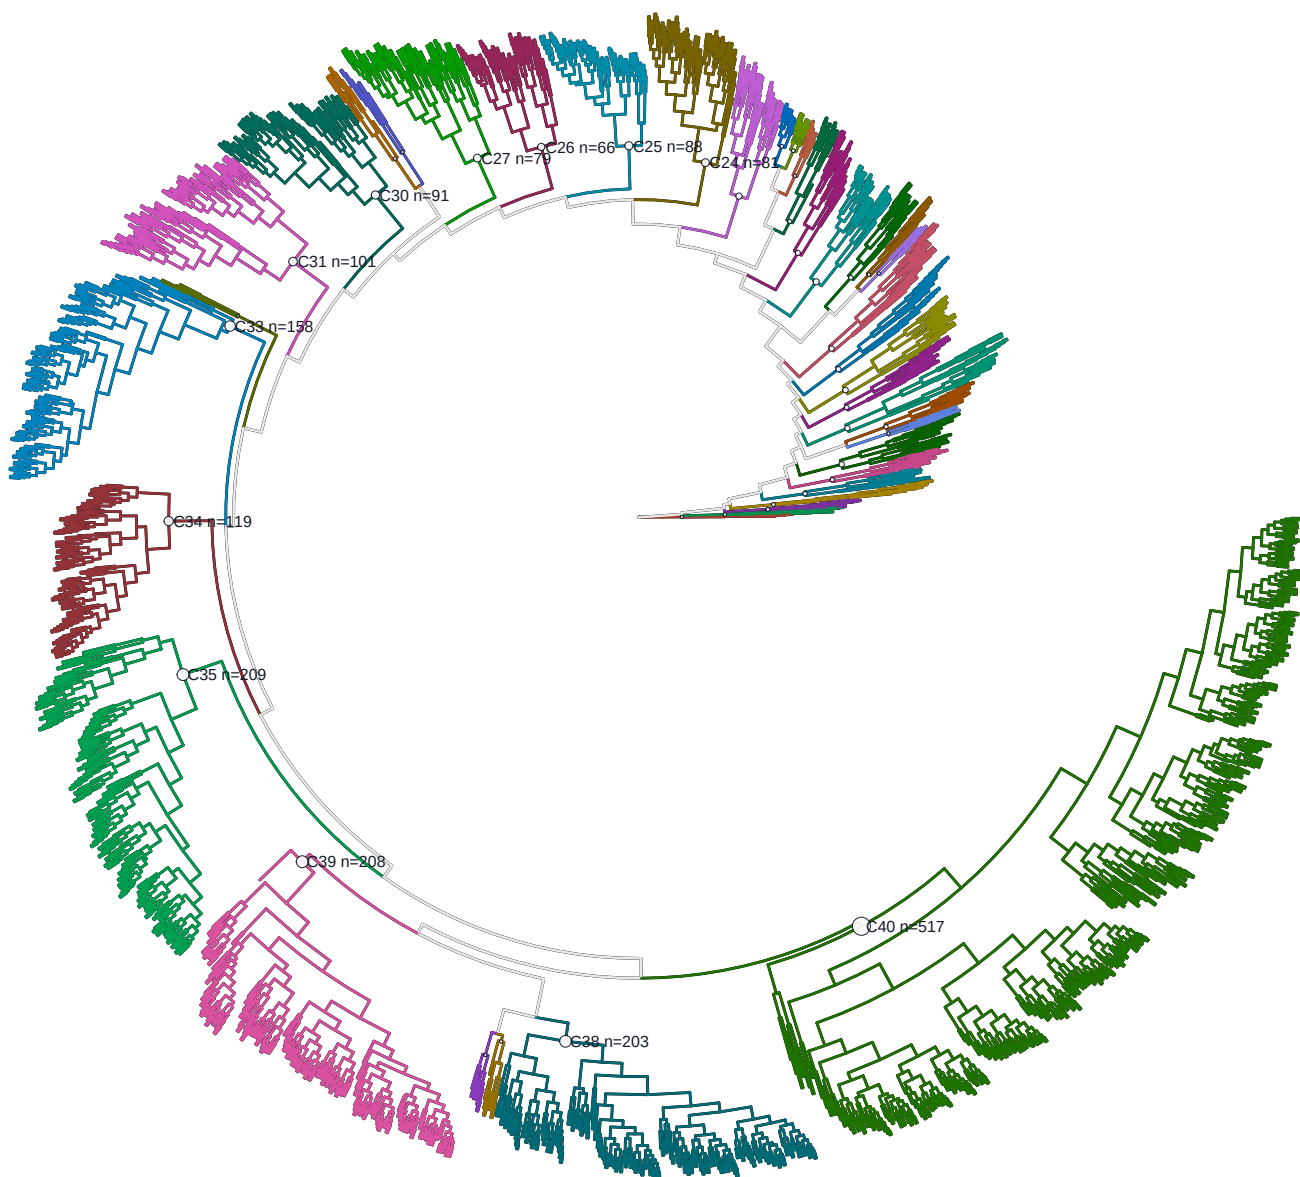

Cluster size 100 200 300 400 500

Adaptive diffusion raw-linkage branch-time diagnostic TBS UMAP

41 total clusters; 12 clusters >= 50 cells labeled

Colored branches = final cluster subtrees; pale grey = shared ancestors; display branch lengths sqrt-capped

Cluster size 100 200 300 400 500
