

legacy c2ef

Historical c2ef legacy method using the TF-IDF gene-gene cosine subspace components 02-05 and the legacy PosetTree gate.

Method: legacy c2ef. Values shown on each tree page are: G0-BIC/gene, where lower is better within comparable non-degenerate trees; coherent, the fraction of clusters passing the G0-enrichment rule; within TF-IDF, the weighted mean within-cluster G0-vector cosine; largest, the fraction of genes in the largest cluster; and singletons, the singleton-gene fraction.

Best tree in this method-specific PDF:

legacy_c2ef__tfidf__components_02_05

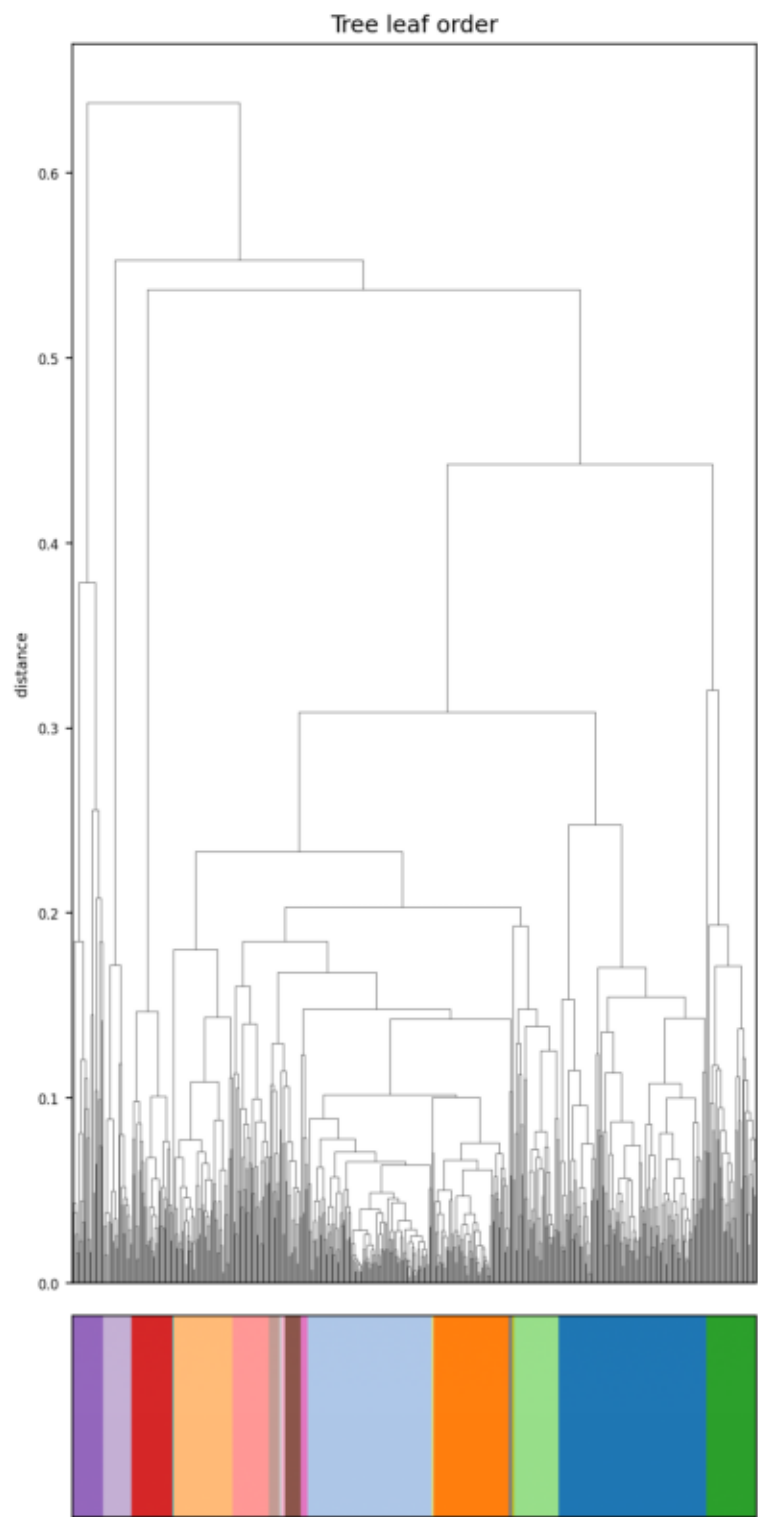

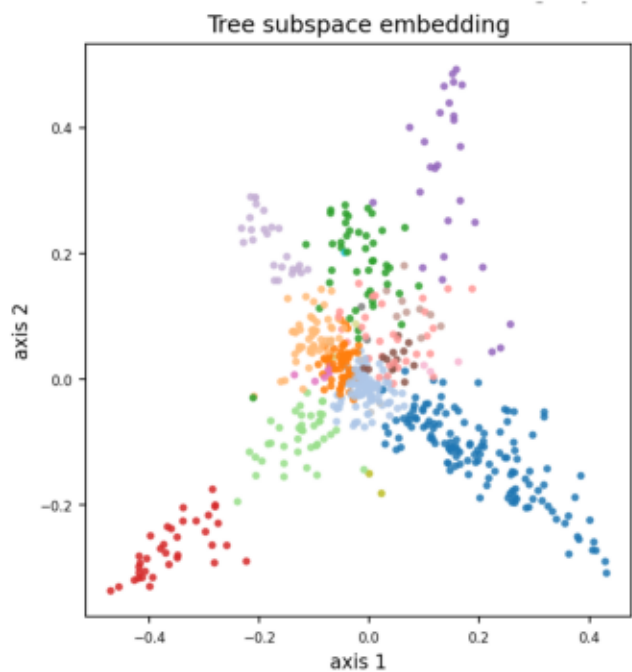

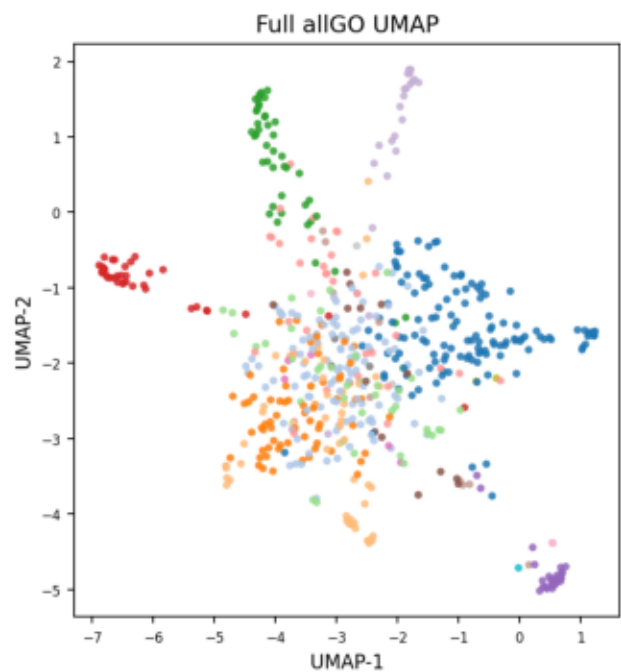

G0-BIC/gene: 1504.87

clusters: 19

coherent clusters: 11/19 (0.579)

largest cluster fraction: 0.216

singleton-gene fraction: 0.002
