

current + adaptive diffusion cosine subspace

Current KL gates applied to adaptive diffusion trees built inside cosine eigenspace blocks.

Method: current + adaptive diffusion cosine subspace. Values shown on each tree page are: GO-BIC/gene, where lower is better within comparable non-degenerate trees; coherent, the fraction of clusters passing the GO-enrichment rule; within TF-IDF, the weighted mean within-cluster GO-vector cosine; largest, the fraction of genes in the largest cluster; and singletons, the singleton-gene fraction.

Best tree in this method-specific PDF:

current__adaptive_diffusion_cosine_subspace__tfidf__adaptive_modes_02_05

GO-BIC/gene: 1687.97

clusters: 40

coherent clusters: 21/40 (0.525)

largest cluster fraction: 0.233

singleton-gene fraction: 0.008
