

current + raw cosine subspace

Current KL gates applied to a raw cosine eigenspace block tree.

Method: current + raw cosine subspace. Values shown on each tree page are: G0-BIC/gene, where lower is better within comparable non-degenerate trees; coherent, the fraction of clusters passing the G0-enrichment rule; within TF-IDF, the weighted mean within-cluster G0-vector cosine; largest, the fraction of genes in the largest cluster; and singletons, the singleton-gene fraction.
