

current + whole adaptive diffusion

Current KL gates applied to a full-matrix adaptive diffusion tree.

Method: current + whole adaptive diffusion. Values shown on each tree page are: G0-BIC/gene, where lower is better within comparable non-degenerate trees; coherent, the fraction of clusters passing the G0-enrichment rule; within TF-IDF, the weighted mean within-cluster G0-vector cosine; largest, the fraction of genes in the largest cluster; and singletons, the singleton-gene fraction.

Best tree in this method-specific PDF:

current__whole_adaptive_diffusion

G0-BIC/gene: 1475.90

clusters: 20

coherent clusters: 15/20 (0.750)

largest cluster fraction: 0.568

singleton-gene fraction: 0.000

current + whole adaptive diffusion | method rank 01 | display rank 01 | raw GO-IC rank 03

current, whole adaptive diffusion | GO-BIC/gene 1475.90 | K=20 | coherent=15/20 | largest=0.568 | singletons=0.000
