

accepted_tbs: binary / adaptive_modes_02_05

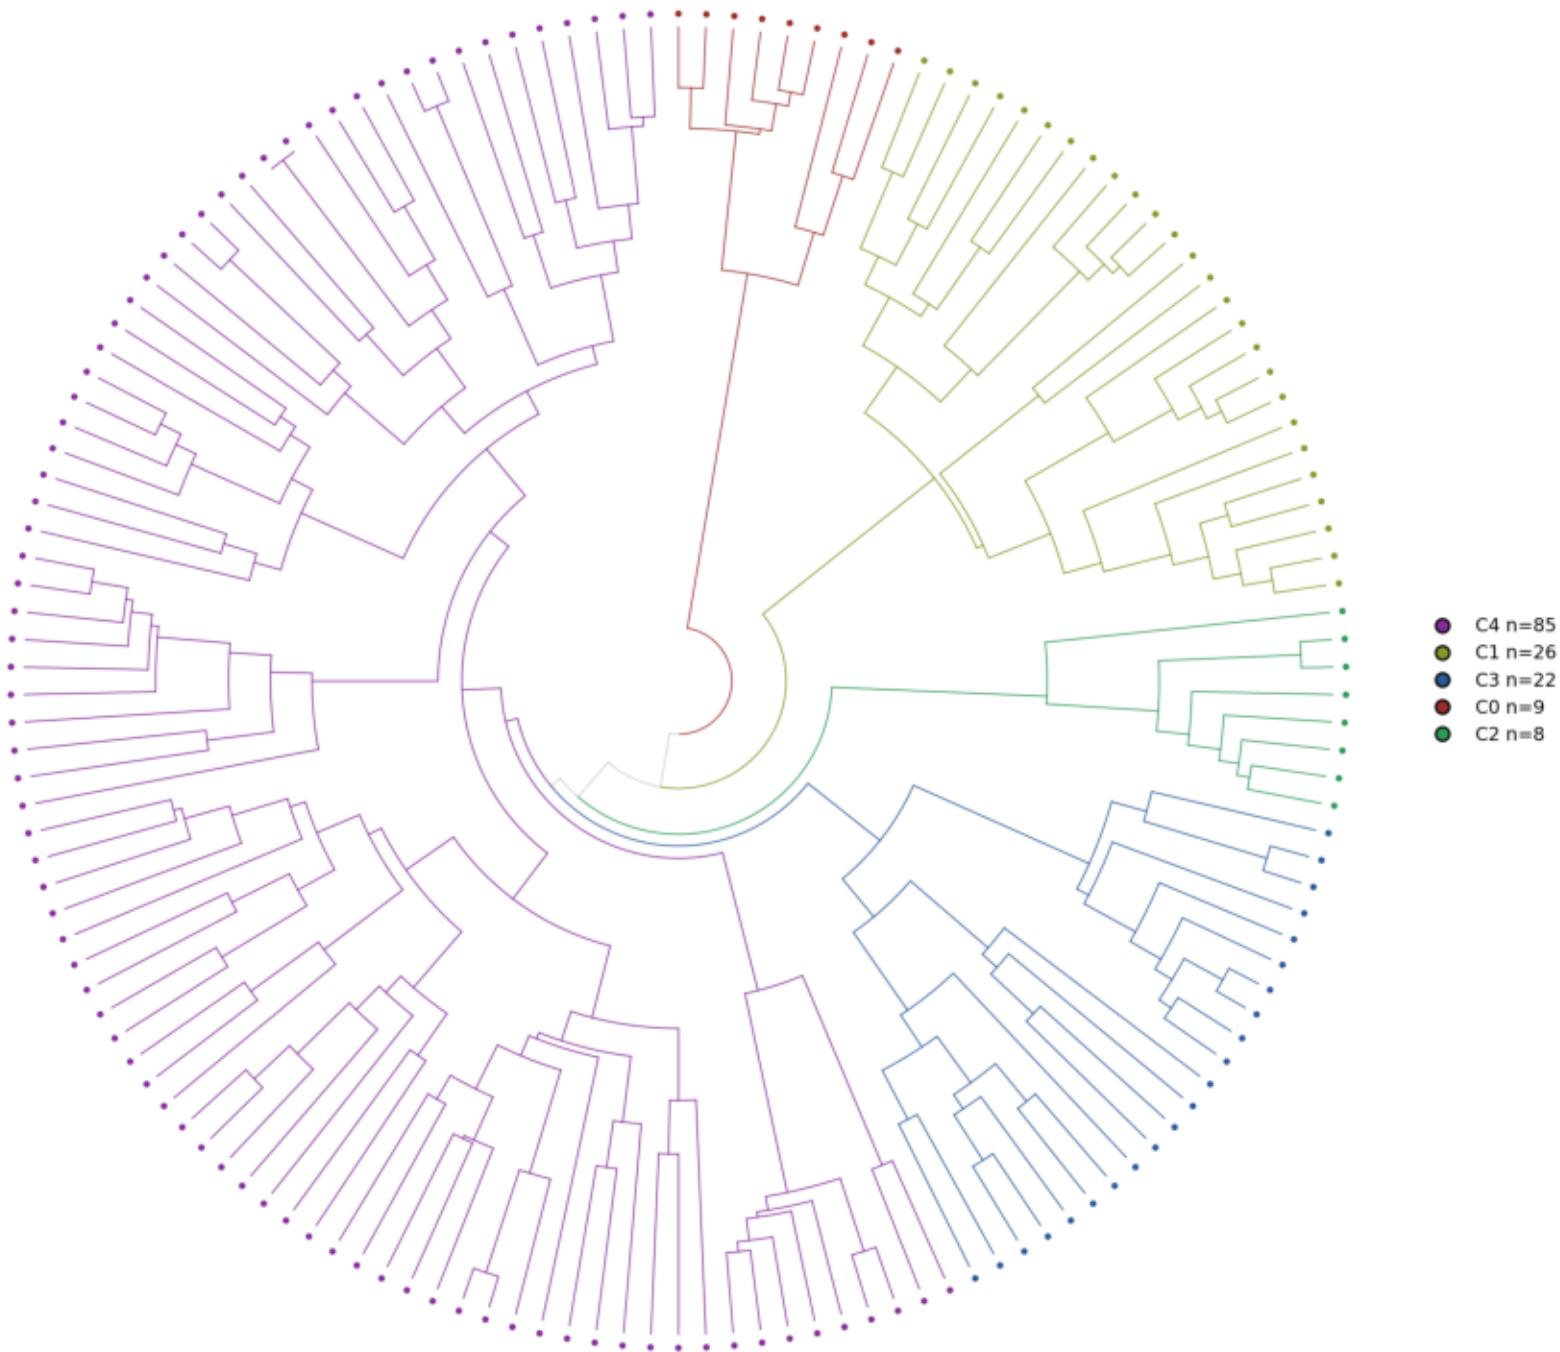

accepted_tbs: binary / adaptive_modes_02_05

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: tfidf / adaptive_modes_11_21

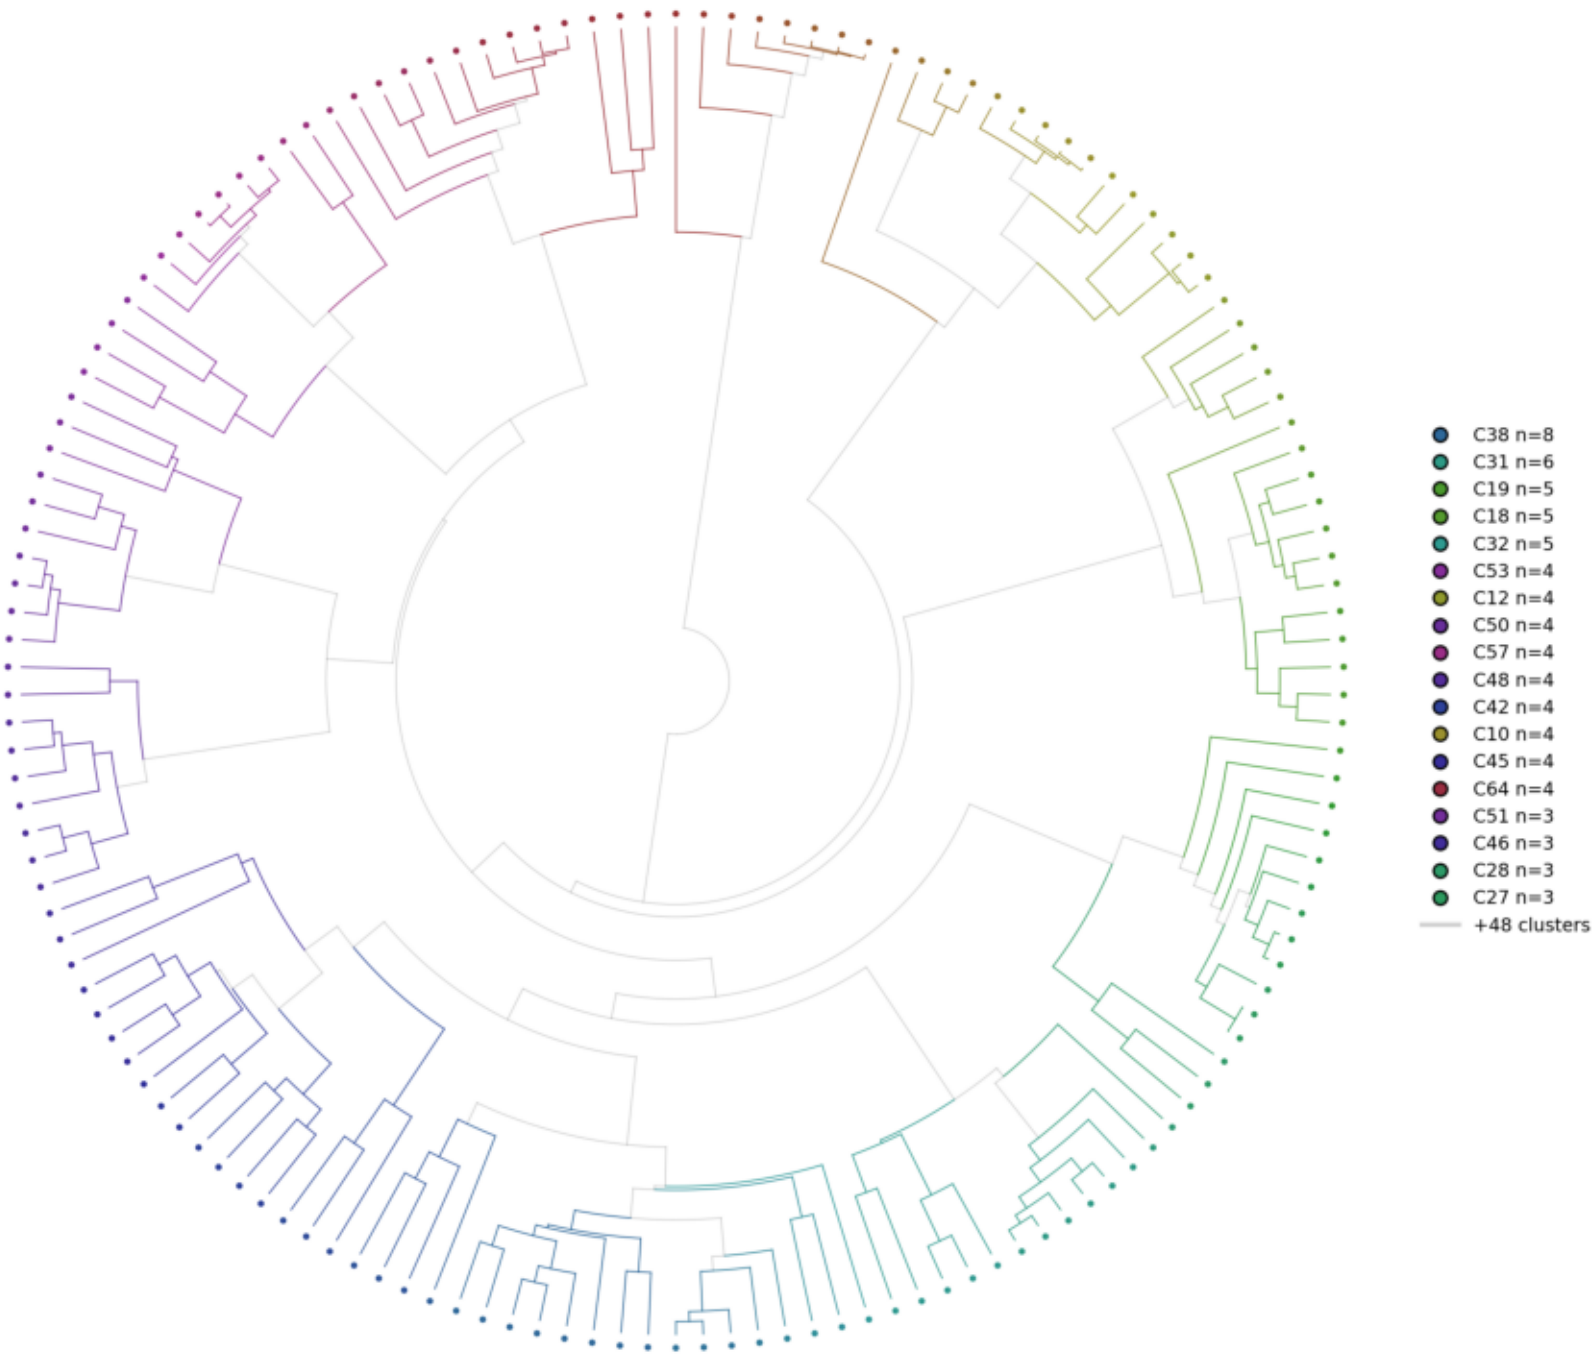

accepted_tbs: tfidf / adaptive_modes_11_21

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: tfidf / adaptive_modes_06_10

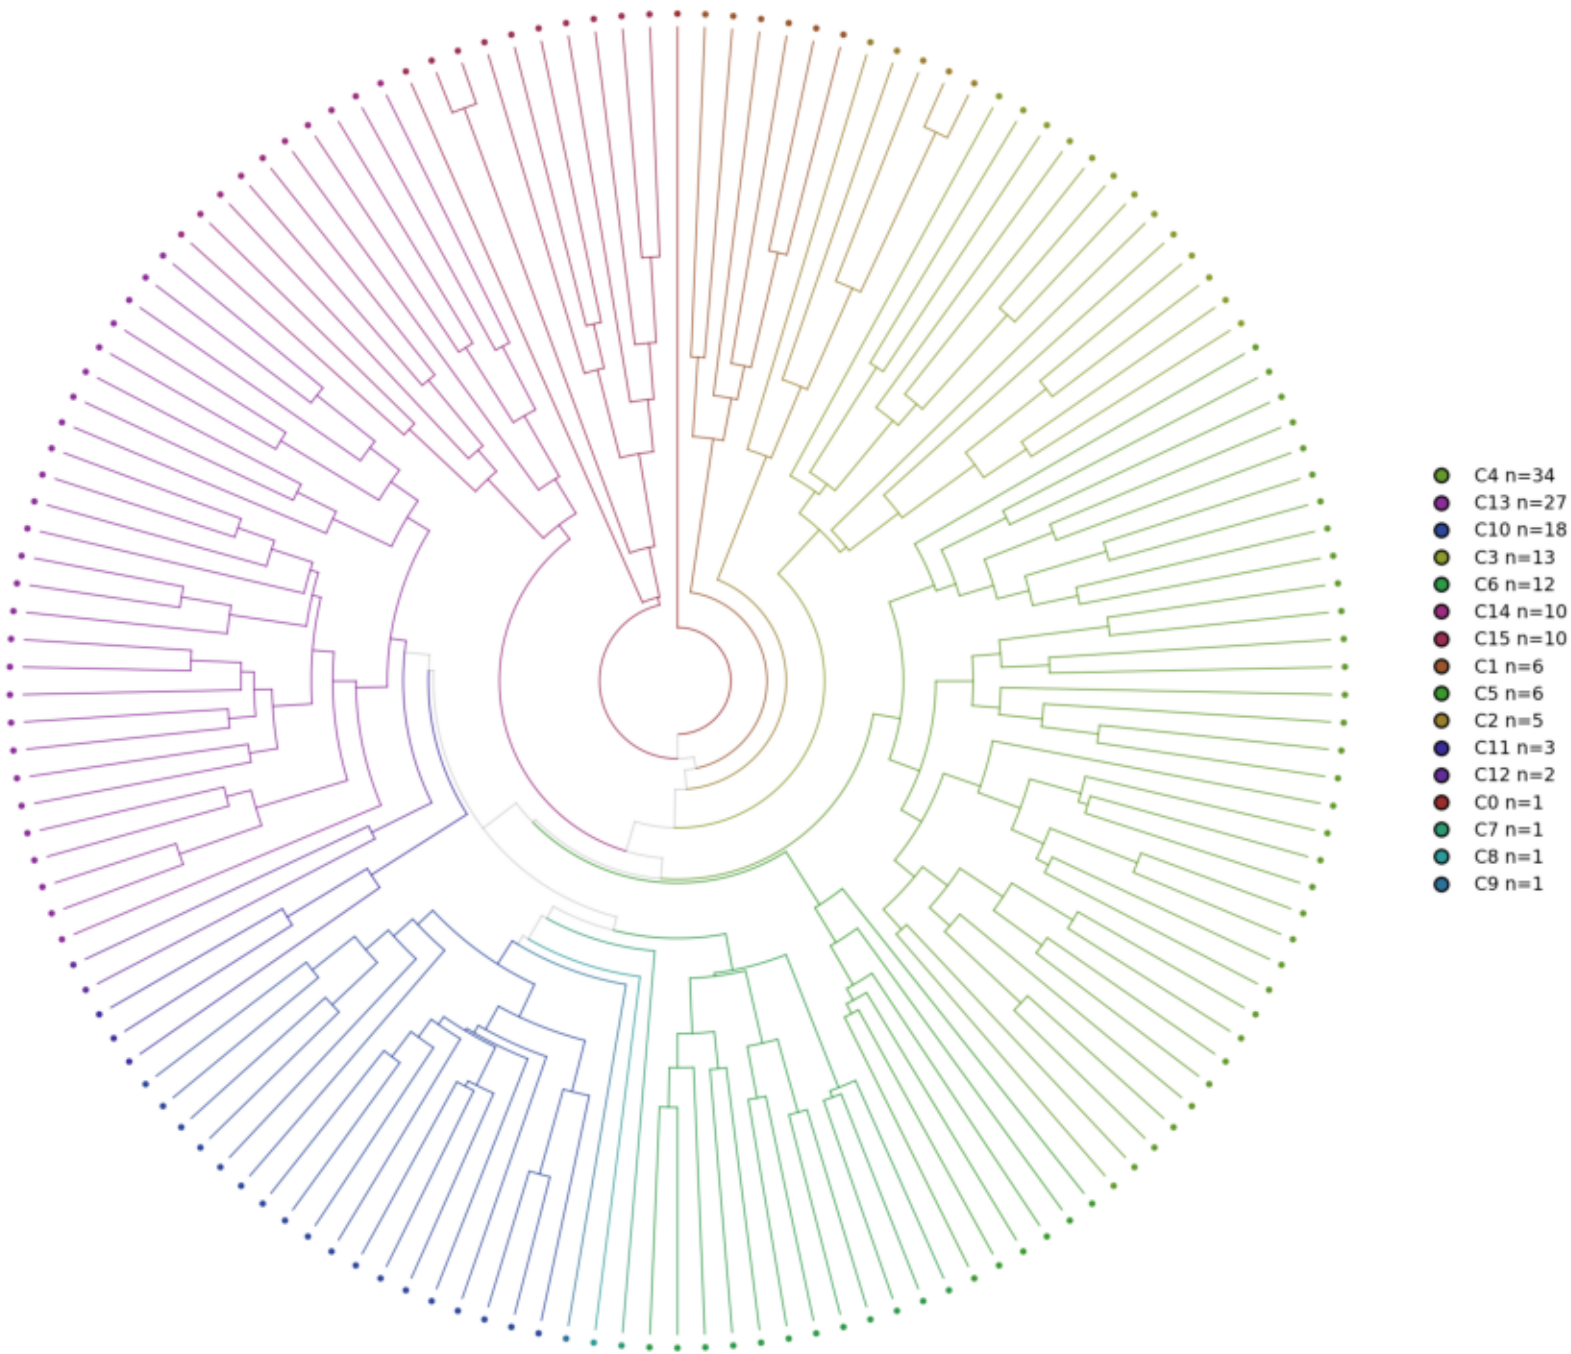

accepted_tbs: tfidf / adaptive_modes_06_10

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: binary / adaptive_modes_52_80

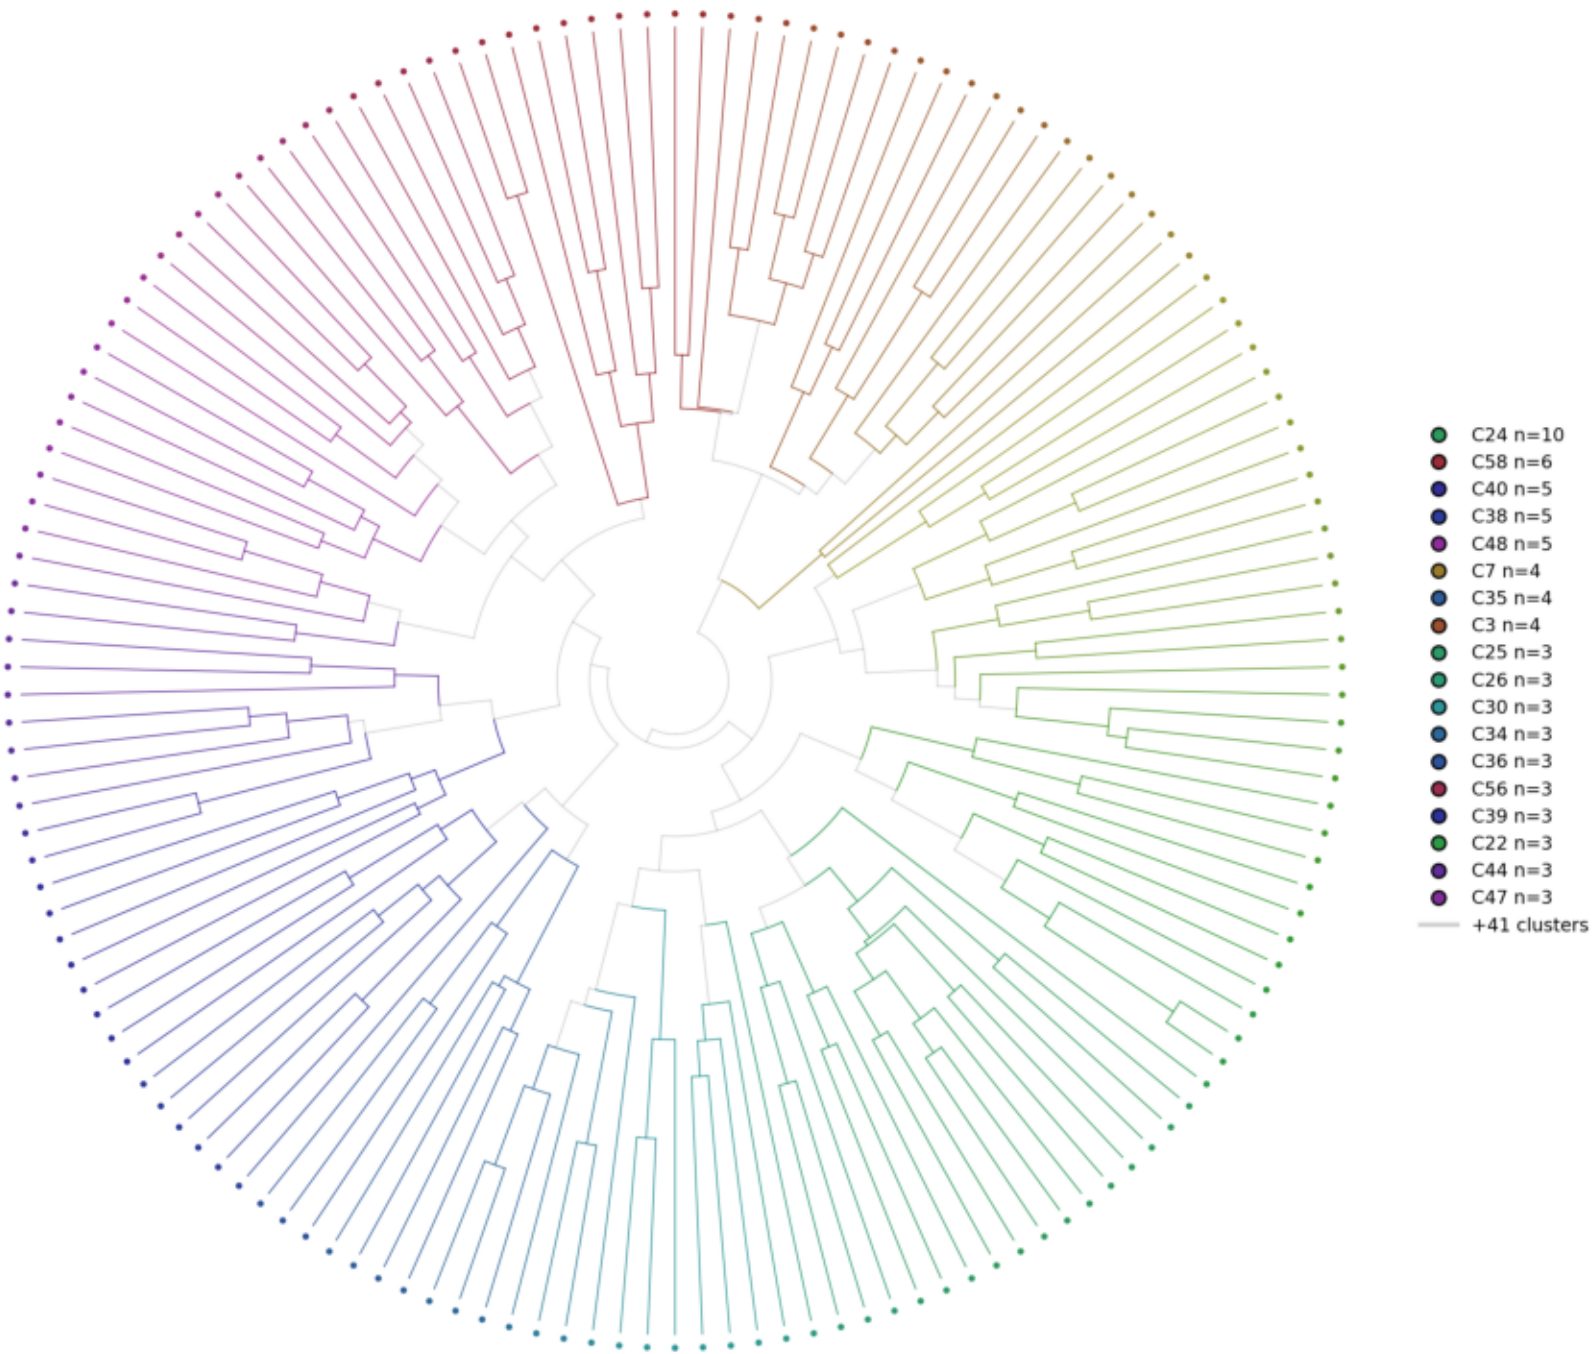

accepted_tbs: binary / adaptive_modes_52_80

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: tfidf / adaptive_modes_63_80

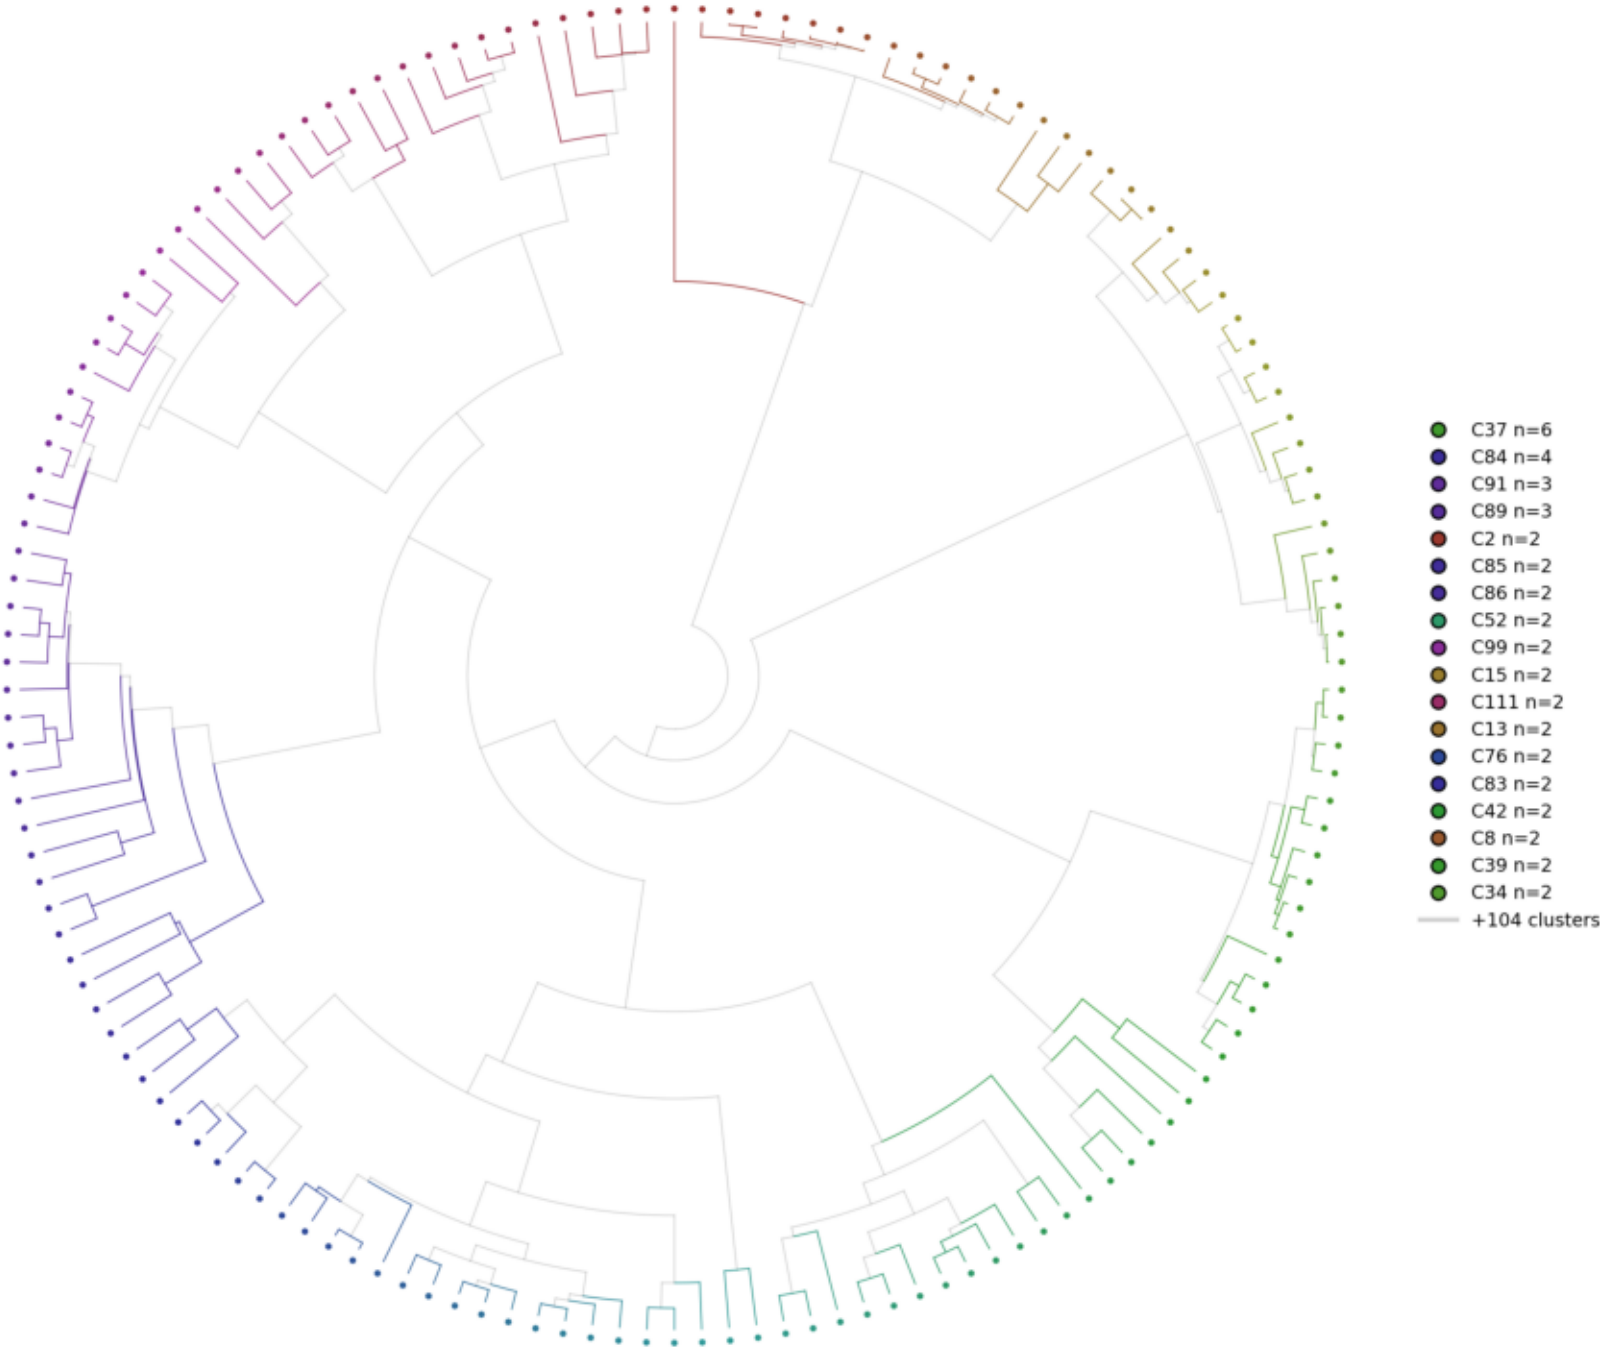

accepted_tbs: tfidf / adaptive_modes_63_80

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: tfidf / adaptive_modes_02_05

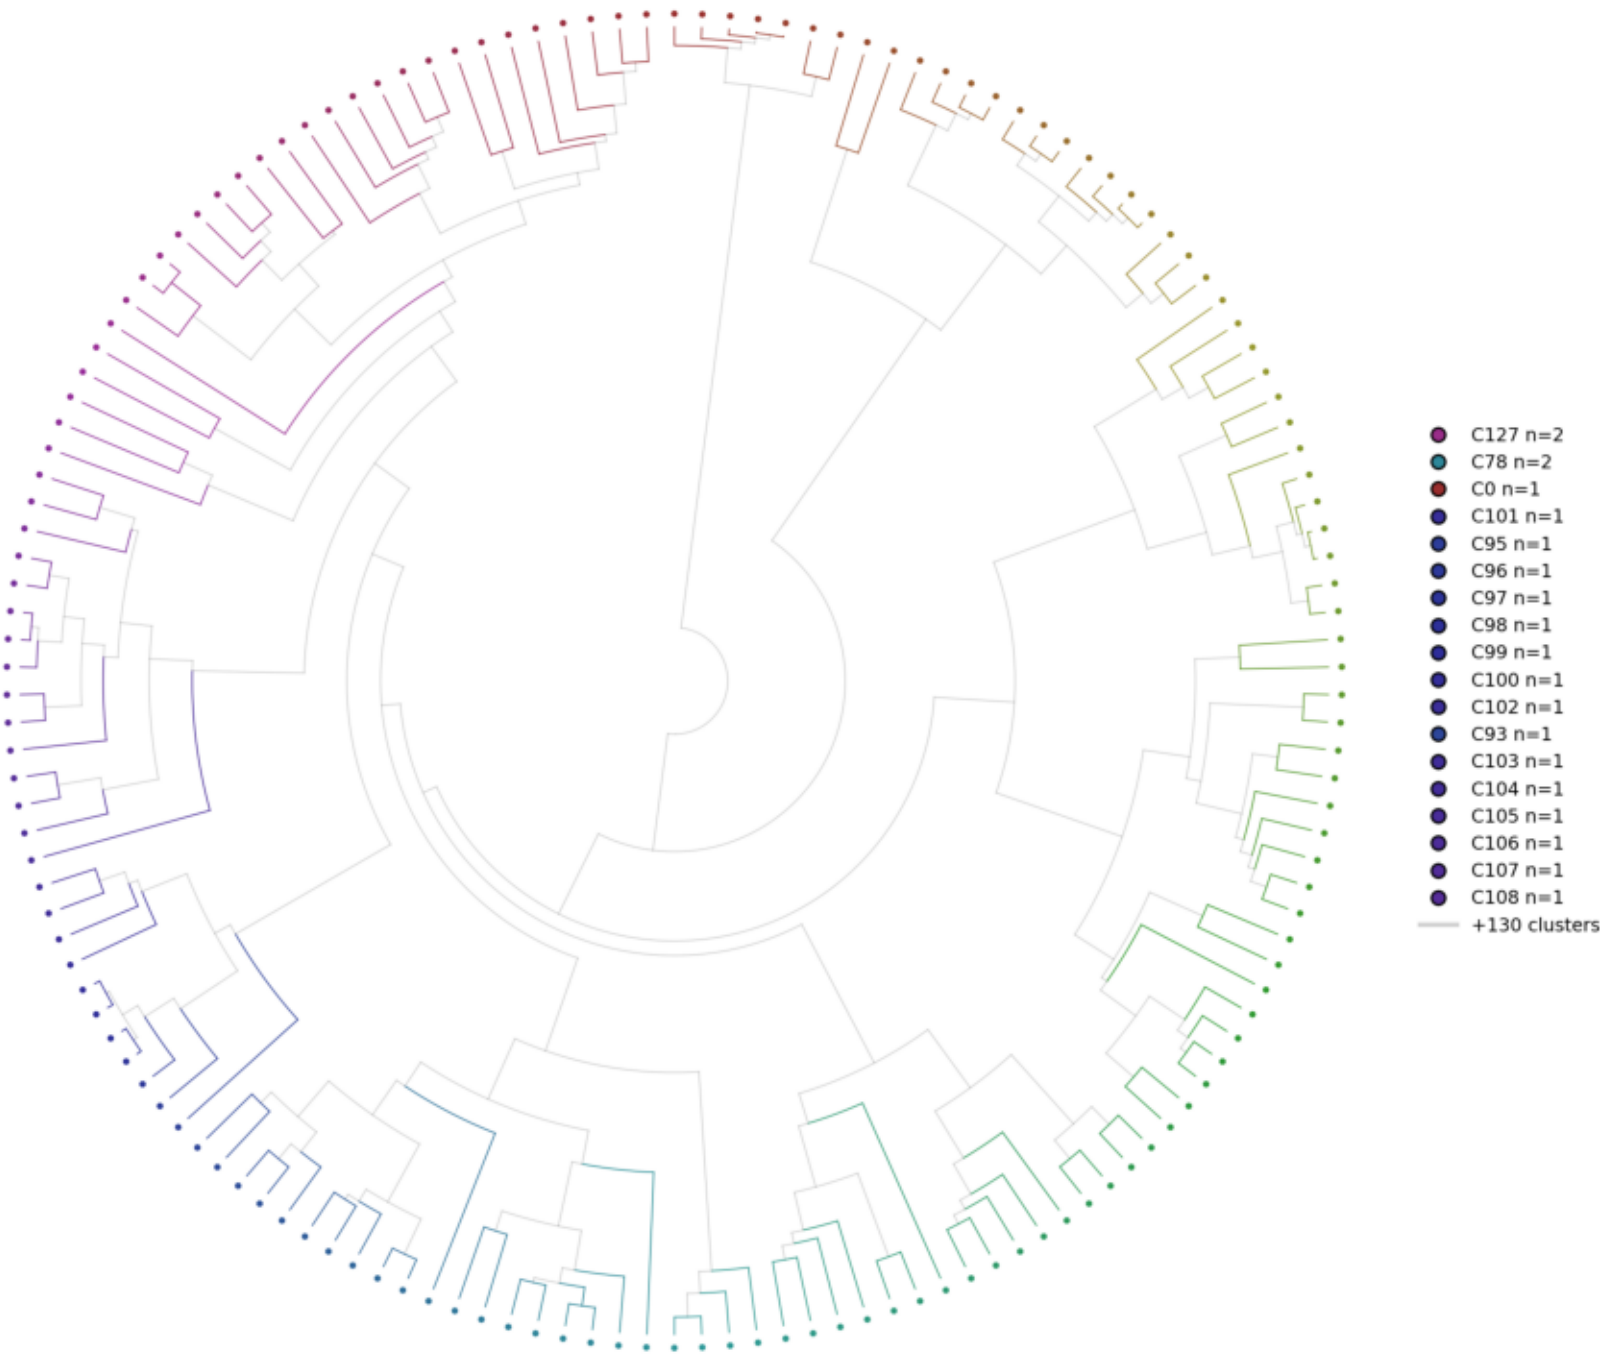

accepted_tbs: tfidf / adaptive_modes_02_05

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: binary / adaptive_modes_06_09

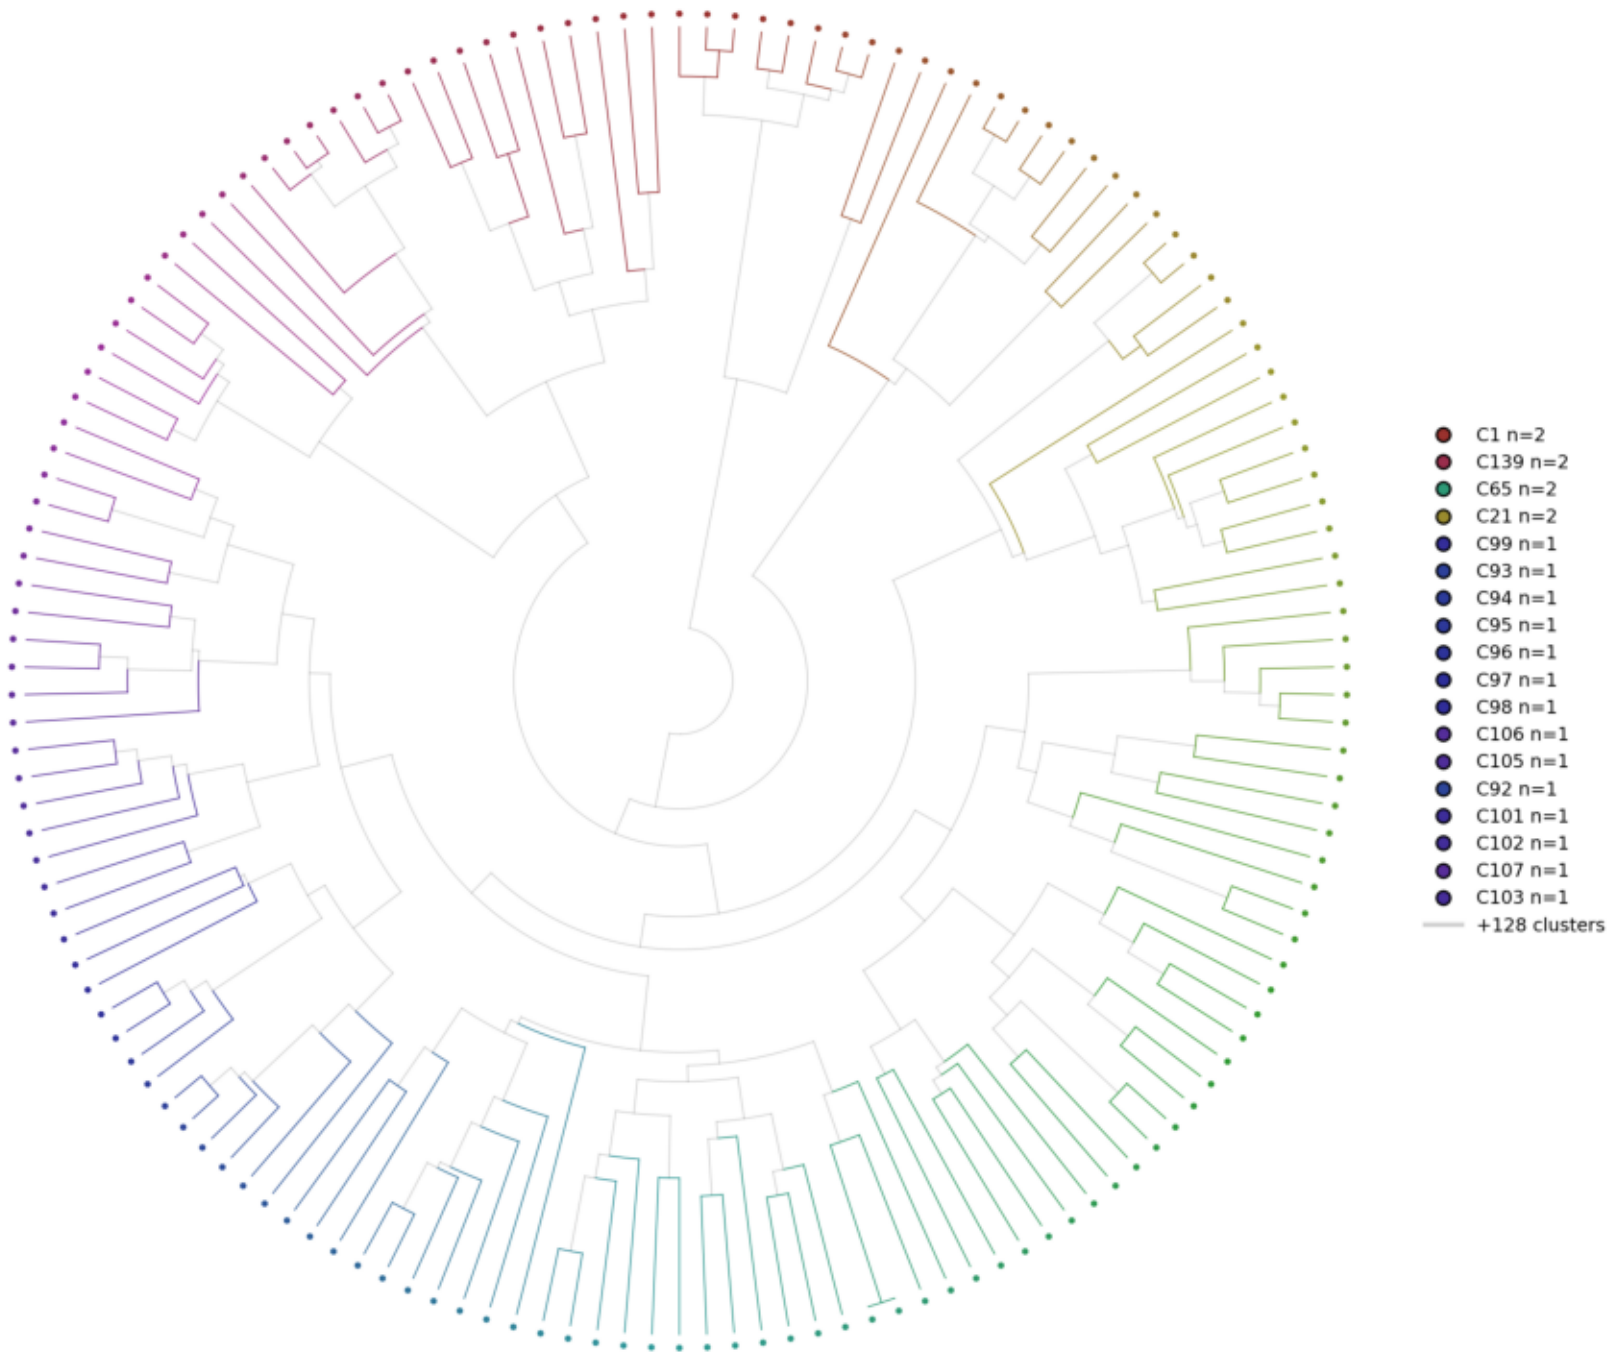

accepted_tbs: binary / adaptive_modes_06_09

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: binary / adaptive_modes_10_21

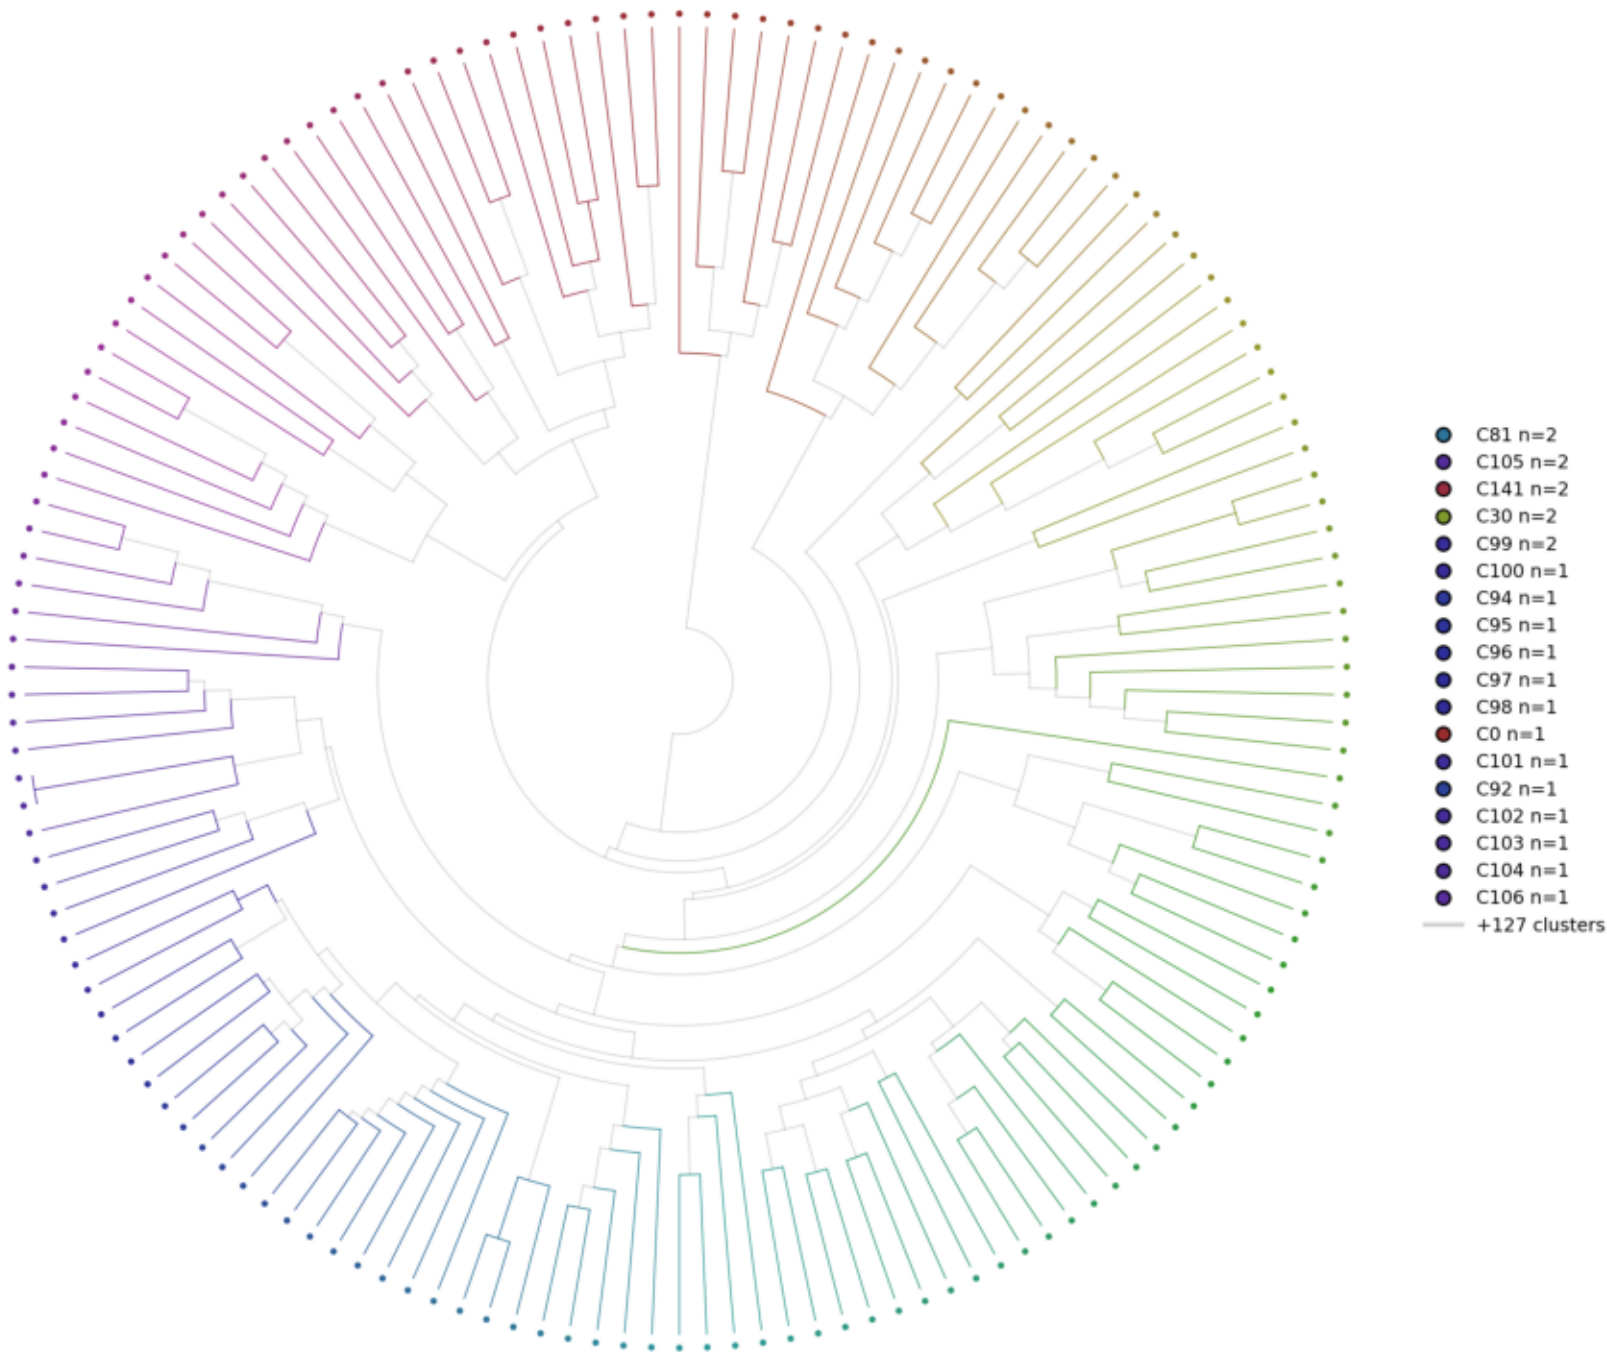

accepted_tbs: binary / adaptive_modes_10_21

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: tfidf / adaptive_modes_22_62

accepted_tbs: tfidf / adaptive_modes_22_62

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: binary / adaptive_modes_22_51

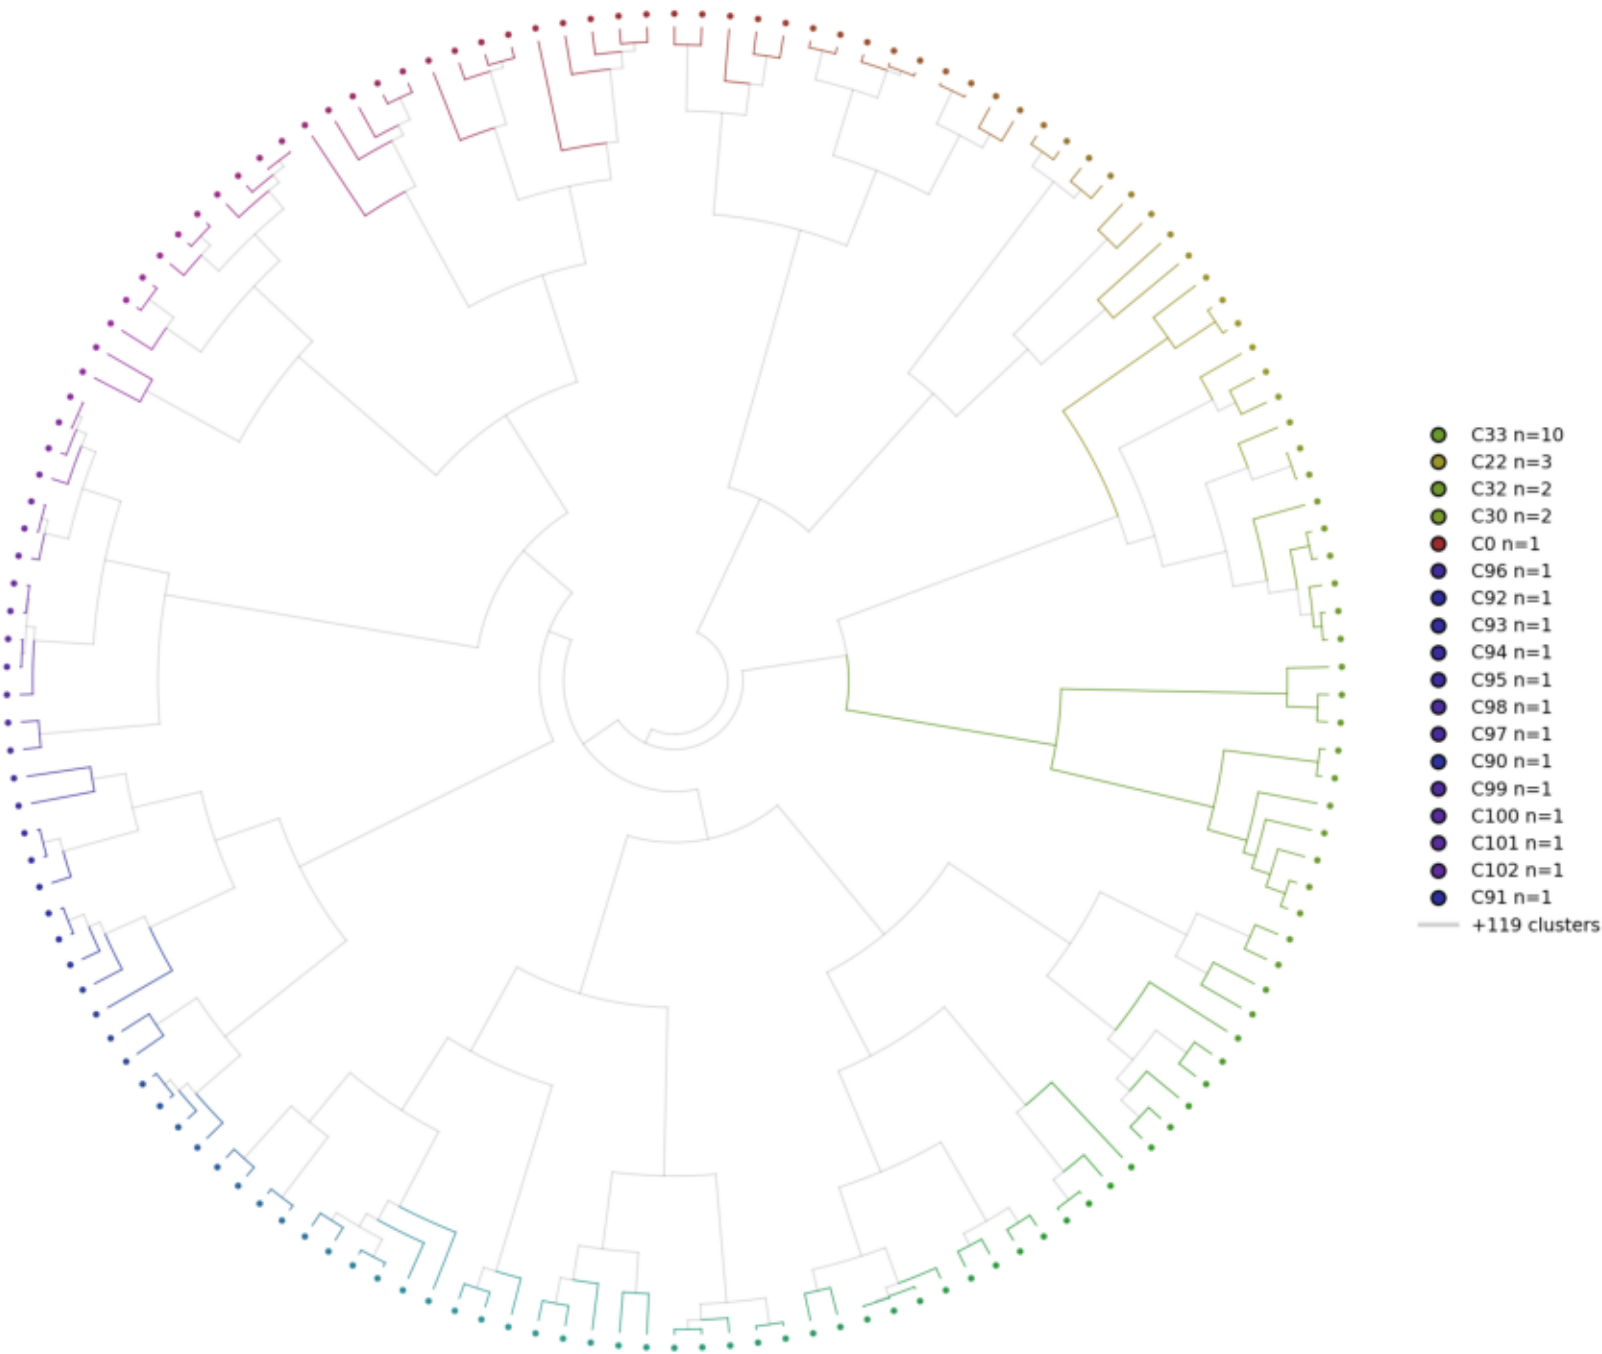

accepted_tbs: binary / adaptive_modes_22_51

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: tfidf / adaptive_common_mode_01

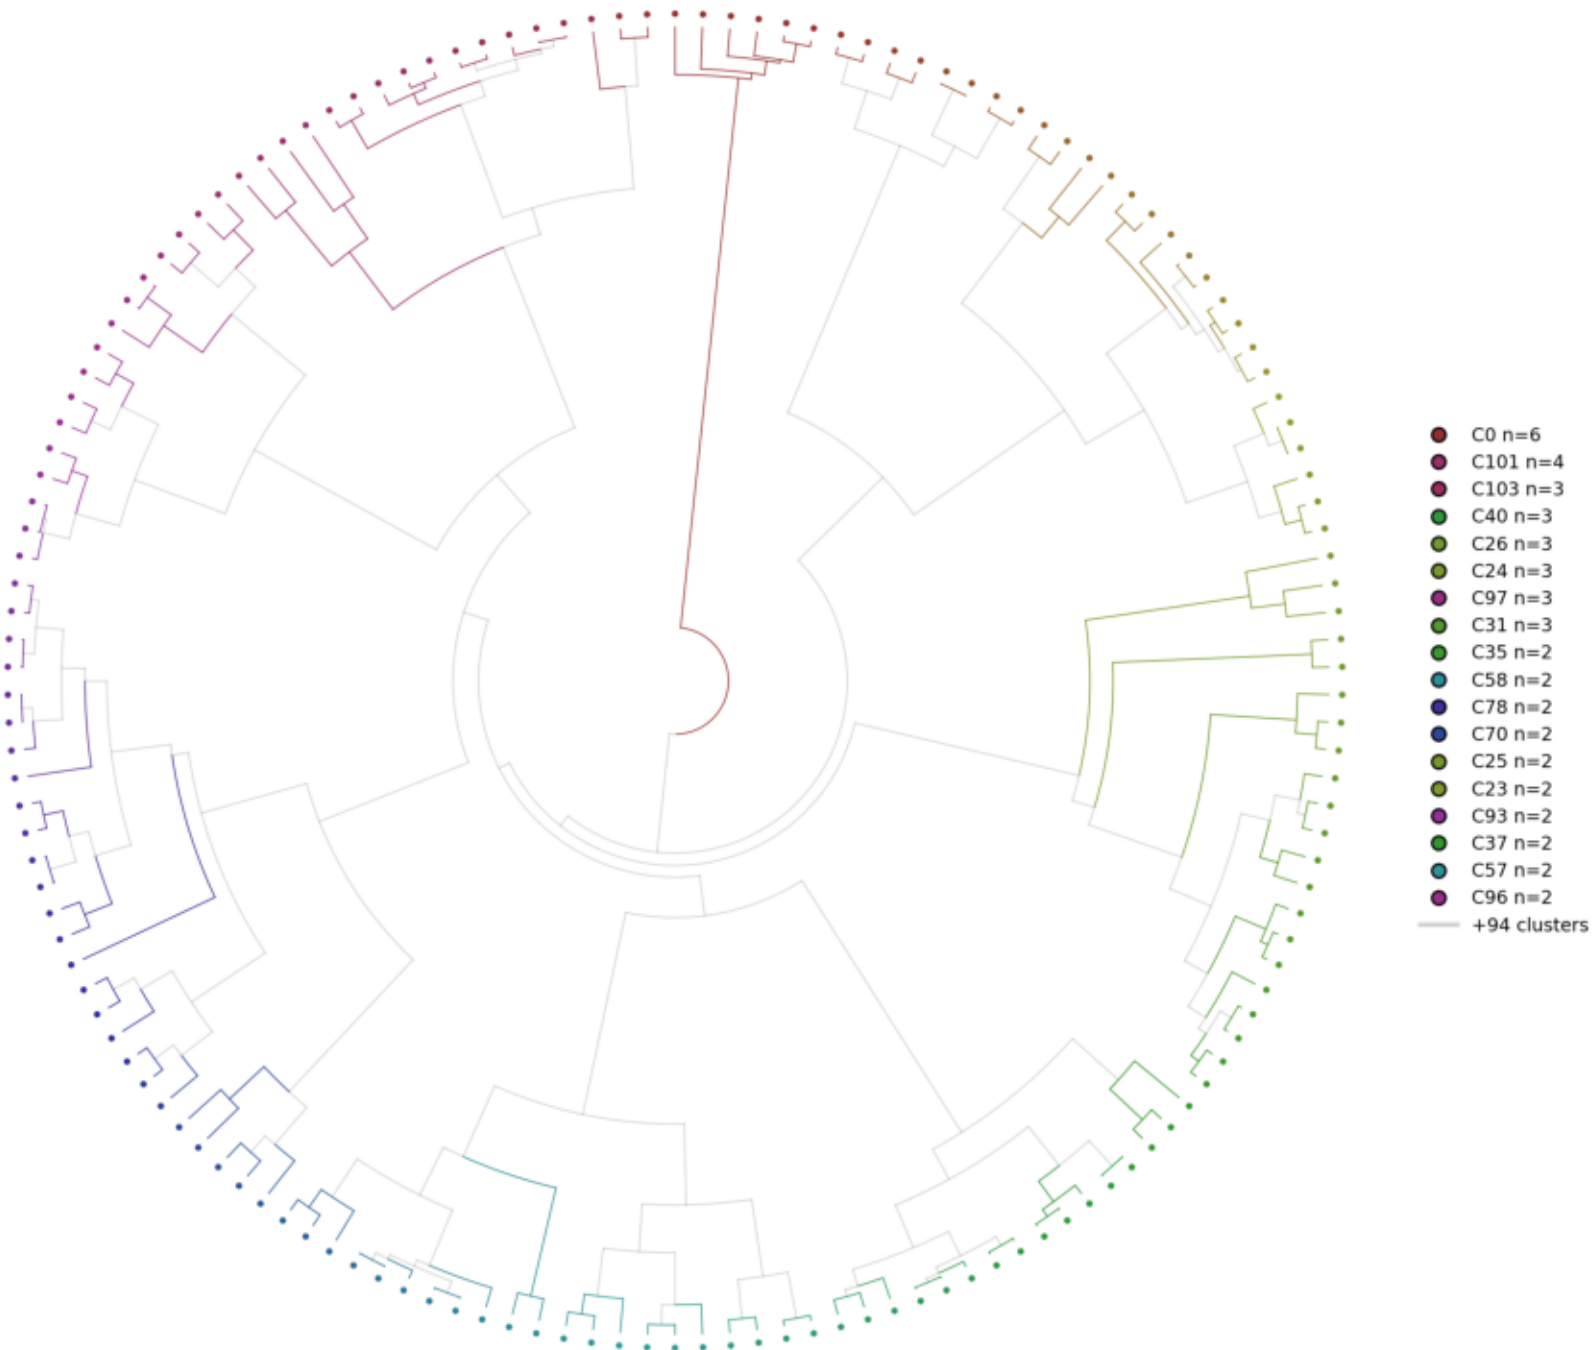

accepted_tbs: tfidf / adaptive_common_mode_01

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.

accepted_tbs: binary / adaptive_common_mode_01

accepted_tbs: binary / adaptive_common_mode_01

Radial hierarchy from the saved linkage matrix. Leaf points and pure subtrees are colored by final TBS cluster id; mixed ancestral branches are gray.
